

## EICADD Center Ajman

### Developmental Progress Assessment Report

**Date of Visit:** 14-12-2025

**Child's Name:** Rashed Hassan Al-Ali

**Date of Birth:** 02-08-2019

**Age:** 49 months

**Gender:** Male

**Guardian:** Hassan

#### Overview

Rashed Hassan Al-Ali attended a follow-up developmental assessment at EICADD Center Ajman. Based on the current evaluation and review of prior intervention, the child presents with **information processing delays** and **developmental delays** leading to **hyperlexia closer to Hyperlexia Type 2** (acquired features consistent with autism).

The child has **shown marked improvement following the first development protocol**, indicating good responsiveness to intervention. Despite this progress, continued structured support and targeted monitoring remain necessary to consolidate gains and guide further development.

#### Recommended Plan

##### 1) Development Protocol for Information Processing

- Continue the development protocol for **4 months**, followed by **re-evaluation**, preferably **in person**.
- Reassess progress to **establish an updated baseline** and refine improvement projections.
- Continue with the current intervention plan to support sustained developmental gains.

#### Recommended Therapy

##### Neuroplasticity Rehabilitation Therapy

- Frequency: **2–3 sessions per week**
- Status: **Continue** according to the current plan

## Conclusion

Rashed has demonstrated **significant improvement** following the initial development protocol, supporting the presence of modifiable, acquired developmental features rather than a fixed condition. Continued intervention, alongside targeted growth-factor analysis, is recommended to further enhance information processing, language integration, and adaptive functioning. Ongoing reassessment will allow refinement of the plan based on objective progress.

## Notes on External Testing

The recommended tests are conducted through **Neurazon (Canada), a bioinformatics company partnered with certified laboratories worldwide**. Please refer to the plan provided by Neurazon for further information. Please note that these are recommendations and not obligatory, and they are not conducted through our centers directly.

## Disclaimer

This assessment is not a final diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and findings may change with progress and intervention. The recommended tests are external and provided through Neurazon (Canada). These are suggestions, not obligatory, and are intended to support a deeper understanding of the child's developmental profile.

**This report is valid for 4 months from the date of assessment.**
