

Director's Report on Developmental Progress Assessment

Date of Visit: 13-08-2025

Child's Name: Amina-Hamad Alahmed

Date of Birth: 11-07-2021

Overview:

Amina-Hamad Alahmed visited our center for a developmental assessment. The evaluation indicated **information processing delays** and **global developmental delays** that have led to features of **intellectual developmental delays** and **acquired features of autism**. The child is open for improvement, and further assessment is recommended to determine the underlying causes and refine the intervention plan.

Recommended Plan:

1. **Development Protocol for Information Processing**
 - Implement for 4 months, followed by an in-person reassessment.
 - Reevaluate the plan and establish a developmental baseline.
 - Continue with the intervention plan according to observed progress.
2. **Recommended Tests (through Neurazon, Canada):**
 - **Please refer to their report and assessment. These analyses are not done at EICADD.**
3. **Recommended Therapy:**
 - **Neuroplasticity Rehabilitation Therapy:** To be introduced in later stages, once the child is ready for this form of intensive intervention.

Disclaimer:

This assessment is not a final diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and the findings may change with progress and intervention. The recommended tests are external and provided through Neurazon (Canada). These are suggestions, not obligatory, and are intended to support a deeper understanding of the child's developmental profile. Please refer to the plan provided by Neurazon for further information. These tests are not conducted directly through our center.
