

## Director's Report on Developmental Progress Assessment

**Date of Visit:** 15-10-2025

**Child's Name:** Lauin Alalo

**Date of Birth:** 23-06-2020

**Age:** 5 years 3 months

**Gender:** Male

**Guardian:** N/A

---

### Overview:

Lauin was assessed at our center for developmental progress and cognitive processing evaluation.

The results indicate that the child presents with **information processing delays** and **global developmental delays** that have led to **acquired features of autism**. These findings reflect a pattern of developmental differences rather than a fixed or genetic form of autism.

The child demonstrates variable cognitive responses and learning adaptation, suggesting potential for progress with proper structured intervention. Further analysis is needed to understand underlying biochemical and neurological contributors to these developmental patterns and to optimize the therapeutic approach.

EICADD

---

### Recommended Plan:

#### 1. Development Protocol for Information Processing

- Continue the **developmental protocol** for information processing for **4 months**, followed by a **reevaluation**, preferably conducted in person.
- During reevaluation, establish a **new developmental baseline** to track measurable improvement.
- Maintain consistency with the current intervention plan and continue with home-based stimulation activities aligned with the center's recommendations.

---

#### 2. Recommended Tests through Neurazon (Canada):

The recommended analyses are conducted through **Neurazon (Canada)**, a bioinformatics company partnered with accredited international laboratories.

These analyses are **external recommendations**, not obligatory, and **not conducted directly through our centers**.

They aim to provide additional developmental insights that complement the clinical and therapeutic findings.

### 3. Recommended Therapy:

- **Rehabilitation Therapy – Plasticity Therapy (later stages):**  
To be determined following reassessment based on progress and updated findings.
- **Speech and Occupational Therapy (Start Immediately):**  
Begin structured speech and occupational therapy sessions focusing on receptive and expressive language, fine motor coordination, and adaptive behavioral responses. Early initiation will accelerate developmental progress and complement the neuroplasticity protocol.

### Notes on External Testing:

The recommended analyses are conducted through **Neurazon (Canada)**, a bioinformatics company partnered with accredited international laboratories.

These analyses are **external recommendations**, not obligatory, and **not conducted directly through our centers**.

They aim to provide additional developmental insights that complement the clinical and therapeutic findings.

### Disclaimer:

This assessment is **not a final diagnosis** but a developmental evaluation based on current observations.

The child shows potential for improvement with consistent therapy and structured follow-up.

This report remains **valid for 4 months** from the date of assessment.

The recommended tests are **external and optional**, conducted through **Neurazon (Canada)**.

*This report is valid for 4 months from the date of assessment.*
