

**Director's Report on Developmental Progress Assessment**

**Date of Visit:** May 3rd, 2025

**Child's Name:** Alwan Al Alawnah

**Date of Birth:** September 22nd, 2022

**Assessment:**

Awan was assessed in person and has **greatly improved** on the initial developmental protocol. The child currently presents with **minor speech developmental delays and behavioural delays**, while all other previous signs of developmental delay have resolved. Continued monitoring and supportive therapy are advised to ensure complete resolution.

**Recommended Plan:**

**1) Development Protocol for Information Processing:**

- Continue the intervention protocol for **4 months**
- Reevaluate the child **preferably in person**
- Establish a new developmental baseline
- Maintain consistent developmental support

EICADD

**2) Recommended Tests:**

- No additional testing is required at this stage
- Further tests may be recommended depending on findings at the **next evaluation**

**3) Recommended Therapy:**

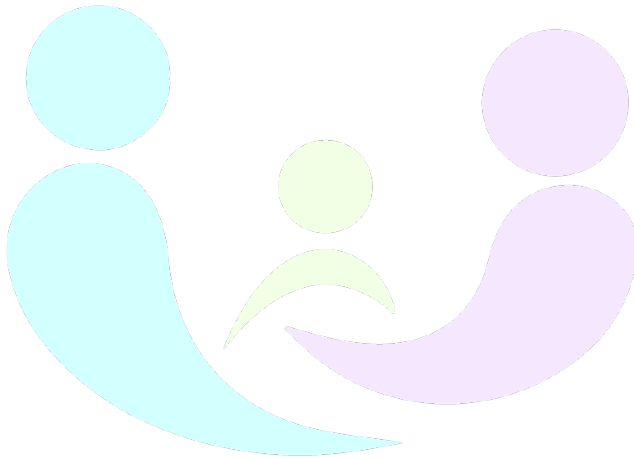

- Continue with the **rehabilitation therapy plan**
- Add **mitotherapy (light therapy)** at a frequency of **1–2 sessions per week**

**Conclusion:**

This is a **rehabilitation assessment** and not a definitive medical diagnosis. Awan is progressing well and remains capable of full developmental resolution with continued supportive care and follow-up.

**EICADD**
