

Director's Report on Developmental Progress Assessment

Date of Visit: 04-03-2023

Child's Name: Yousef Hamdan

Date of Birth: 04-03-2023

Age: 23 months

Gender: Male

Guardian: Mohammad

Overview

Yousef was assessed at our center for developmental progress. The evaluation showed **information processing delays** and **general developmental delays**. Encouragingly, the child has **improved greatly on the first protocol**, indicating strong potential for further progress with continued intervention. Additional assessment will be required to better understand underlying factors and to refine the intervention plan.

Recommended Plan

1. Development Non-Medicinal Protocol for Information Processing

1. Continue with a structured, non-medicinal developmental protocol.
2. Duration: 4 months, followed by reevaluation (preferably in person).
3. Reassess baseline measures during reevaluation to guide adjustments.
4. Continue with the current intervention plan to sustain progress.

2. Recommended Therapy

- **Speech Therapy (ST):** 2 sessions per week to support communication and language development.
- **Mitotherapy (Light Therapy):** 2–3 sessions per week to enhance regulation, processing, and developmental outcomes.

Conclusion

This assessment confirms that Yousef presents with information processing and developmental delays but has demonstrated **significant improvement** following the first protocol. With

consistent therapy, structured interventions, and ongoing reassessment, the child remains open for continuous developmental progress.

Disclaimer

This assessment is not a final diagnosis but a developmental evaluation based on current findings. The child remains open to improvement, and results may change with therapy and ongoing monitoring. Recommendations provided are supportive and not obligatory.
