Director's Report on Developmental Progress Assessment

Date of Visit: 23-08-2025

Child's Name: Zahraa-Ebrahim Ali

Date of Birth: 28-05-2009

Gender: Female

Guardian: Ebrahim

Overview

Zahraa-Ebrahim was assessed for developmental functioning. Findings indicate **information processing delays** and broader **developmental delays** that have led to **acquired features of intellectual developmental delay and cognitive delay**. She **does not meet diagnostic criteria for autism**. Notably, her **identical twin sister shows similar features**, though less evident. **Further analyses** are recommended to clarify contributing biological factors and to optimize the intervention plan.

Recommended Plan

1) Development Protocol for Information Processing

- Implement a structured protocol for **4 months** (attention, working memory, comprehension, processing speed).
- **Reevaluate in person** after 4 months to establish a clear baseline and adjust goals.
- Continue and adapt the intervention according to measured progress.

2) Main Recommended Analyses (through Canada – Neurazon)

The tests are provided through **Neurazon (Canada)**. They are **recommendations, not obligatory**, and are **not conducted directly through our center**.

3) Therapy

- **Neuroplasticity Rehabilitation Therapy (intensive): start as soon as possible**, focusing on processing efficiency, language and academic skills, working memory, and daily-living independence.
- Parent-guided home routines (15–20 minutes daily) to reinforce attention, sequencing, and self-regulation strategies.

Conclusion

This document reflects a developmental assessment. Zahraa-Ebrahim is **capable of improvement** with consistent therapy, family engagement, and the recommended analyses. Findings may evolve with progress and at the next in-person reassessment.

Notes on External Testing

The above tests are provided through **Neurazon (Canada)**. They are **recommendations, not obligatory**, and are **not conducted directly through our center**.

Disclaimer

This assessment is **not a final diagnosis** but a developmental evaluation based on current observations. The child is open to improvement, and findings may change with progress and intervention.
