

Director's Report on Developmental Progress Assessment

Date of Visit: 28-04-2025

Case Name: Ali Sajjad Qasim

Date of Birth: 05-07-2022

Gender: Male

Guardian: Sajjad

Assessment

Ali was assessed in person at our center on 28-04-2025.

The evaluation findings revealed:

- **Information Processing Delays**
- **Developmental Delays**
- **Acquired features of Autism** linked to delayed overall development, but the child does **not meet the criteria** for a formal diagnosis of Autism Spectrum Disorder at this stage.

The child shows potential for improvement with early and targeted intervention.

This assessment provides a developmental and functional analysis for therapy planning and is not considered a final medical diagnosis.

Recommended Plan

1) Development Protocol for Information Processing

- Implement a **structured**, age-appropriate intervention plan focusing on cognitive engagement, sensory integration, and early communication development.
- **Duration:** 4 months
- **Reevaluation:** Preferably in person after completion of the protocol to assess developmental progress and establish a new intervention baseline.
- **Goal:** Support early cognitive, language, and adaptive skill growth through neurodevelopmental stimulation.

2) Main Recommended Analysis

- **Precision Health Analysis (through Neurazon – Canada):**
A detailed analysis to investigate potential genetic, metabolic, or functional factors contributing to the child's developmental delays.
Sample: Saliva
Turnaround Time: 4 months business days.

- **Neuronal Growth Factors Absorption Analysis (through Neurazon – Canada):**
Screening to evaluate the child's ability to absorb and utilize key neuronal nutrients essential for brain growth and connectivity.
Sample: Hair
Turnaround Time: 2 months business days.
Frequency: Repeated every 6–12 months depending on clinical outcomes.

3) Main Recommended Therapy

- **Occupational Therapy Sessions:**
2 sessions per week targeting:
 - Sensory processing skills
 - Fine and gross motor development
 - Regulation strategies
- **Speech Therapy Sessions:**
2 sessions per week focusing on:
 - Early communication skills
 - Receptive and expressive language
 - Social communication development
- **Light Therapy Sessions:**
1 session per week focused on:
 - Enhancing neuronal activation
 - Supporting mood and attention regulation
 - Promoting neuroplasticity

EICADD

Follow-Up Plan

- **Reassessment:**
After 4 months to evaluate progress in cognitive, motor, communication, and adaptive developmental areas and adjust the plan accordingly.
- **Continuous Monitoring:**
Detailed session records, therapist observations, and parent feedback will be used to guide the ongoing intervention.
- **Important Note:**
This evaluation is for developmental planning purposes and does not represent a medical diagnosis. Early intervention remains critical for optimizing developmental outcomes at this young age.
