

Director's Report on Developmental Progress Assessment

Date of Visit: 09-07-2025

Child's Name: Omar Mohammad Mohammad

Date of Birth: 08-09-2022

Gender: Male

Guardian Name: Mohammad

Overview:

Omar was assessed at our center and found to have **information processing delays** and **developmental delays**, with emerging characteristics of **Hyperlexia Type 1**. At this stage, the features have **not yet progressed to Hyperlexia Type 2**, and timely intervention is essential to guide the child toward the more functional and communicative **Hyperlexia Type 3**. Further assessment and close follow-up are necessary to support this trajectory.

Recommended Plan:

1. **Development Protocol for Information Processing:**
 - Apply for 4 months, followed by reevaluation (preferably in person)
 - Establish a developmental and cognitive baseline
 - Continue with the customized intervention plan
2. **Recommended Analyses (via Neurazon – Canada):**

Please refer to their report and assessment. These analyses are not done at EICADD.

3. **Recommended Therapy:**
 - Continue with **speech and occupational therapy**
 - Begin **neuroplasticity rehabilitation therapy** (2 sessions per week), starting as soon as possible

Disclaimer:

This assessment is not a final diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and the findings may change with progress and intervention. The recommended tests are external and provided through Neurazon (Canada). These are suggestions, not obligatory, and are intended to support a deeper understanding of the

child's developmental profile. Please refer to the plan provided by Neurazon for further information. These tests are not conducted directly through our center.
