

Director's Report on Developmental Progress Assessment

Date of Visit: 24-05-2025

Child's Name: Oday Al Hassan

Date of Birth: 06-11-2018

Age: 6 years

Gender: Male

Guardian: Murad

Overview:

Oday Al Hassan was assessed at our center on May 24th, 2025. The evaluation indicated the presence of **information processing delays** and **developmental delays**, which have contributed to traits leaning toward **hyperlexia**, closer to **Hyperlexia Type 2**, although he does not fully meet the criteria at this stage. Further analysis is necessary to better understand the underlying causes and to tailor an effective intervention plan.

Recommended Plan:

- Development Protocol for Information Processing:**
 - Implement the current development protocol for **4 months**.
 - Reevaluate the child in person after this period to establish a new baseline.
 - Continue adjusting the intervention based on observed progress.
- Main Recommended Analysis:**

These tests are recommended through Neurazon (Canada) and are not conducted directly through our center. Please refer to their test.

- Recommended Therapy (to follow after identifying the causes):**
 - Mitotherapy therapy:** 2–3 sessions per week.
 - Neuroplasticity therapy:** To be initiated in the later stages (available in UAE).
 - Occupational and Speech Therapy:** 2 OT sessions + 2 ST sessions per week.

Disclaimer:

This assessment is not a final diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and the findings may change with progress and intervention.

This assessment is not a final diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and the findings may change with progress and intervention. The recommended tests or therapies are suggestions and intended to support a deeper understanding of the child's developmental profile. Please consult your care provider or follow the plan provided for more detailed guidance.
