

Director's Report on Developmental Progress Assessment

Date of Visit: 23-06-2025

Child's Name: Yassen Ibrahim Shehab

Date of Birth: 24-06-2018

Overview:

Yassen was assessed at our center and demonstrated **information processing delays** and **developmental delays** contributing to **learning difficulties**. These challenges require a focused intervention plan. While no indications of autism were noted during this assessment, further analysis is recommended to gain a deeper understanding of the developmental concerns.

Recommended Plan:

1. Development Protocol for Information Processing

- Implement for a period of 4 months
- Reevaluate the child in person following the initial intervention period
- Establish a baseline to monitor developmental progress
- Continue the intervention plan based on response and improvements

2. Main Recommended Analysis:

- Further analysis will be determined **based on observed progress** during the intervention phase
- No immediate testing is required unless progress is limited

3. Recommended Therapy After Determining the Causes:

- Therapy recommendations will be tailored **according to the child's improvement** following the first intervention cycle

Disclaimer:

This assessment is not a final medical diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and the findings may change with progress and intervention. The recommended tests are external and provided through Neurazon (Canada). These are suggestions, not obligatory, and are intended to support a deeper understanding of the child's developmental profile. Please refer to the plan provided by Neurazon for further information. These tests are not conducted directly through our center.

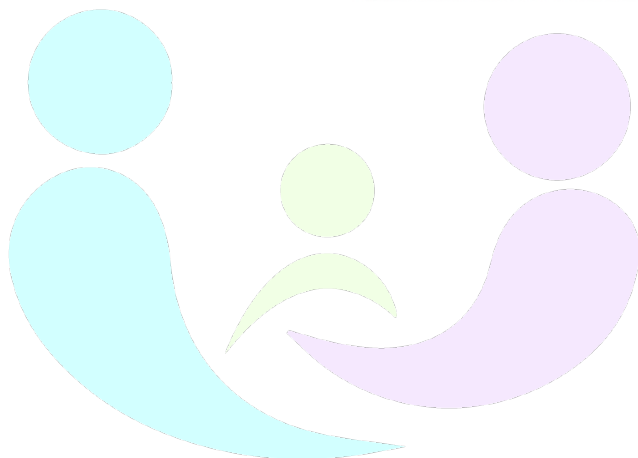

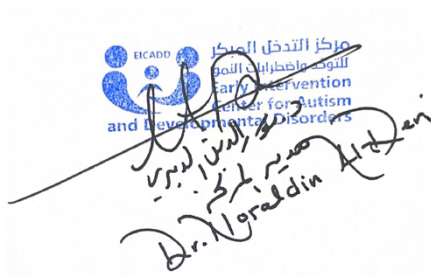

Centers' Leading Staff:

Speech Therapist: Ms. Amira Alomari

Occupational Therapist: Ms. Malak Jaber

Psychologist and behaviour therapist (Ajman): Ms. Asmaa Alshanawi
