- **Acquired Features of Autism**
- **Postivie MRI for white matter delays.**

The child requires **further analyses** to identify contributing factors and guide a comprehensive intervention plan.

EICADD

Recommended Plan

1) Development Protocol for Information Processing

- Continue the **information processing protocol for 4–6 months.**
- **Reevaluate in person** to establish a baseline and monitor progress.
- Adjust the intervention plan according to the child's response.

2) Main Recommended Analysis (Based on Next Evaluation)

- **Please refer to their report for assessment. These analyses are not done at EICADD.**

3) Recommended Therapy

- **Neuroplasticity Rehabilitation Therapy** – Intensive, to start in **later stages**

- **Speech Therapy (ST) and Occupational Therapy (OT)** – To be continued **at home**

These therapies will target **cognitive processing, language, and daily functional skills** while preparing the child for future intensive neuroplasticity work.

Follow-Up

- **Reevaluation every 4–6 months** to assess progress and adapt therapy plans.
- Integrate **Neurazon analysis results** to personalize interventions for optimal outcomes.

Disclaimer:

This is a **developmental assessment**, not a final diagnosis. Muhammed-Muhammed is **capable of improvement**, and findings may change with therapy and time.

The **recommended tests are external and provided through Neurazon (Canada)**. These are **optional but beneficial**, offering a **deeper understanding of his developmental profile**.
