

EICADD Center Ajman

Director's Report on Developmental Progress Assessment

Date of Visit: 07-07-2025

Child's Name: Amir Chraf El Eslam

Date of Birth: 2019-06-04

Guardian: Chraf

Overview:

Amir Chraf El Eslam visited our center for a follow-up developmental assessment. The child has shown significant improvement since the first stage of intervention. However, current findings indicate the presence of ongoing information processing delays and developmental delays. These are attributed to genetic variants, which have led to acquired features of autism and observable white matter delays.

Recommended Plan:

1. **Development Protocol for Information Processing**
 - Continue a non-medicinal developmental protocol.
 - Duration: 4 months followed by reevaluation, preferably in person.
 - Objective: Reassess and establish a baseline, then adjust the plan accordingly.
2. **Recommended Tests through Neurazon (Canada):**
 - Please refer to their report and assessment.
3. **Recommended Therapy:**
 - Intensive neuroplasticity rehabilitation therapy (to be continued regularly)

Disclaimer:

This assessment is not a final diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and the findings may change with progress and intervention. The recommended tests are external and provided through Neurazon (Canada). These are suggestions, not obligatory, and are intended to support a deeper understanding of the child's developmental profile. Please refer to the plan provided by Neurazon for further information. These tests are not conducted directly through our center.

Speech Therapist: Ms. Amira Alomari

Occupational Therapist: Ms. Malak Jaber

Psychologist and behaviour therapist (Ajman): Ms. Asmaa Alshanawi
