

Director's Report on Developmental Progress Assessment

Date of Visit: 22-10-2025

Child's Name: Jude Jawad

Date of Birth: 15-12-2020

Gender: Male

Guardian: Mother

Overview:

Jude Jawad visited our center for a **developmental progress assessment**. The evaluation indicates that the child presents with **information processing delays** and **global developmental delays**, leading to **intellectual developmental delay features** and **acquired autism features** as a result of the underlying developmental challenges.

The child demonstrates significant potential for progress, particularly with structured and individualized intervention. However, further **biological and metabolic analysis** is required to better understand the contributing factors impacting brain development, cognitive processing, and learning ability.

These findings emphasize the importance of continuing a **comprehensive developmental protocol** supported by specialized analyses to establish a clear and precise intervention roadmap.

Recommended Plan:

1) Development Protocol for Information Processing:

- Continue the structured development protocol for **4 months**, followed by a reassessment (preferably in person).
- Reevaluate the plan and establish a developmental baseline during the next visit.
- Continue with the intervention plan focused on improving information processing, communication, and adaptive developmental progress.

2) Recommended Tests through Neurazon (Canada):

The recommended analyses are conducted through **Neurazon (Canada)**, a bioinformatics company partnered with accredited international laboratories. These are **external analyses**, not conducted directly through our centers.

Please refer to the plan provided by Neurazon for detailed information. These recommendations are **not obligatory** but are encouraged to provide a more comprehensive understanding of the child's neurodevelopmental profile and guide the next stages of intervention effectively.

3) Recommended Therapy:

- **Rehabilitation Therapy:** Plasticity therapy (intensive program – to start in later stages).
- Ongoing **multidisciplinary therapy** focusing on speech, cognitive development, and adaptive behavioral training is recommended.

Notes on External Testing:

The recommended analyses are conducted through **Neurazon (Canada)**, a bioinformatics company partnered with accredited international laboratories. These are **external analyses**, not conducted directly through our centers.

Please refer to the plan provided by Neurazon for detailed information. These recommendations are **not obligatory** but are encouraged to provide a more comprehensive understanding of the child's neurodevelopmental profile and guide the next stages of intervention effectively.

Disclaimer:

This assessment is **not a final diagnosis** but a developmental evaluation based on current findings. The child remains **open to improvement**, and results may evolve with continued therapy and reassessment.

This report is **valid for four (4) months** from the date of assessment.

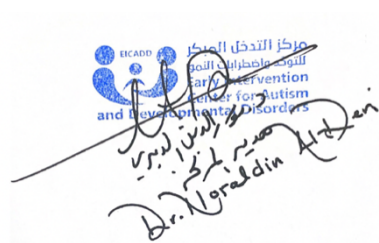

Center's Leading Staff:

Speech Therapist: Ms. Amira Alomari

Occupational Therapist: Ms. Malak Jaber

Psychologist and behaviour therapist: Ms. Asmaa Alshanawi

EICADD Center Director

Dr. Noraldin Al-Dan
