

## **EICADD Center Ajman**

### **Director's Report on Developmental Progress Assessment**

**Date of Visit:** 09-11-2025

**Child's Name:** Rayan Abdulrahman T. Al Harbi

**Date of Birth:** 07-10-2013

**Gender:** Male

**Guardian:** Abdulrahman

---

### **Overview:**

Rayan Abdulrahman T. Al Harbi visited our center for a developmental progress assessment. The evaluation revealed that the child has **Information Processing Delay** and **global developmental delays**, with **acquired features of autism**. However, based on the **Neurazon Precision Health Analysis** conducted externally, Rayan **does not score as a case of autism**, but rather as a case of **cognitive developmental delays**.

The child has shown **notable improvement** following the first protocol, indicating a **high potential for continued progress** with structured and consistent intervention. Although significant progress has been observed, further analysis and continued therapy are required to sustain and enhance developmental outcomes.

---

### **Recommended Plan:**

#### **1) Development Protocol for Information Processing**

- Continue the structured **information processing protocol** for **4 months**, followed by a **re-evaluation**, preferably conducted in person.
- Reassess developmental and cognitive progress and establish a new baseline.
- Continue consistent therapy sessions and ensure adherence to the developmental intervention schedule.

---

#### **2) Main Recommended Analyses:**

The recommended tests are conducted through **Neurazon (Canada)**, a bioinformatics company partnered with accredited international laboratories. Please note that these are **recommendations and not obligatory**, and the tests are **external** and **not performed directly through our center**. Parents are encouraged to refer to the plan provided by Neurazon for further details regarding testing procedures and timelines.

### 3) Recommended Therapy:

- **Rehabilitation Therapy (Plasticity Therapy / Occupational Therapy):**

Continue consistent therapy sessions focusing on neuroplasticity, sensory integration, and adaptive functioning.

- Introduce **intensive plasticity rehabilitation therapy** after 4 months to reinforce information processing and cognitive flexibility.

---

### Notes on External Testing:

The recommended tests are conducted through **Neurazon (Canada)**, a bioinformatics company partnered with accredited international laboratories. Please note that these are **recommendations and not obligatory**, and the tests are **external** and **not performed directly through our center**. Parents are encouraged to refer to the plan provided by Neurazon for further details regarding testing procedures and timelines.

---

### Disclaimer:

This assessment is not a final diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and findings may evolve with progress and continued intervention. The recommended tests are external and provided through Neurazon (Canada). These are suggestions intended to support a deeper understanding of the child's developmental profile. Please note that this report remains **active for 4 months** from the date of assessment.

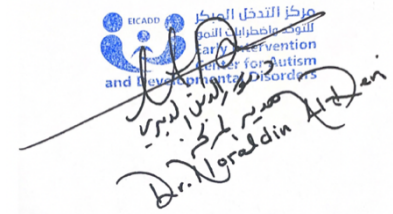

### Centers' Leading Staff:

**Speech Therapist:** Ms. Amira Alomari

**Occupational Therapist:** Ms. Malak Jaber

**Psychologist and behaviour therapist (Ajman):** Ms. Asmaa Alshanawi

**EICADD Center Director**

Dr. Noraddin Al-Din
