

Director's Report on Developmental Progress Assessment

Date of Visit: 24-03-2025

Child's Name: Raed Husam Ahmad Kokash

Date of Birth: 07-03-2019

Overview:

Raed Husam Ahmad Kokash visited our center for a developmental evaluation. During the assessment, Raed exhibited **information processing delays**, **developmental delays**, and **acquired features of autism** that have emerged **secondary to the developmental delays**. These findings indicate that the features observed are **not genetically fixed** but rather acquired due to delays in information processing and development. With appropriate intervention and further analysis, there is potential for improvement in Raed's cognitive and developmental functions.

Recommended Plan:

1) Development Protocol for Information Processing:

- Begin a **development-focused intervention plan** aimed at supporting information processing and cognitive development.
- Duration: **4 months**, followed by an in-person **reevaluation** to assess progress.
- During the reassessment, a **baseline** will be established to adapt the ongoing intervention protocol.

2) Main Recommended Analysis:

- **Recommended through Canada: Precision Health Analysis – Neurazon (Canada)**
 - Purpose: To identify detailed physiological and biochemical factors affecting development.
 - Sample: **Saliva sample**
 - Turnaround: **4 months (business days)** for results.
- **Recommended through Canada: Gut Absorptions Analysis – Neurazon (Canada)**
 - Purpose: To evaluate **gut health** and absorption efficiency, which are crucial for development.
 - Sample: **Hair sample**
 - Turnaround: **2 months (business days)**
 - Frequency: Recommended **every 6-12 months**.
- **Recommended through Canada: Neuronal Growth Factors Absorptions Analysis – Neurazon (Canada)**
 - Purpose: To assess the **absorption of key neuronal growth factors**.
 - Sample: **Hair sample**
 - Turnaround: **2 months (business days)**
 - Frequency: Recommended **every 6-12 months**.

END OF REPORT

Therapy Recommendations:

- **Therapy Sessions**
 - Focus: **Speech or Occupational Therapy** incorporating **assistive technology** tools for cognitive and communicative support.
- **Mitotherapy (Light Therapy)**
 - Purpose: Supportive therapy to stimulate **cellular energy** and support **neurodevelopment**.

Conclusion:

This assessment is not a final diagnosis but a current evaluation of Raed's developmental status. He demonstrates the capacity for progress, and with adherence to the recommended protocol and therapies, significant improvement is possible. The **recommendations are based on research and Neurazon's protocols**, and parents are encouraged to proceed for optimal results.
