

Director's Report on Developmental Progress Assessment

Date of Visit: 04-09-2025

Child's Name: Abdulaziz Hussain Alasousi

Date of Birth: 12-12-2018

Age: 6 years, 9 months

Gender: Male

Guardian: Hussain

Overview

Abdulaziz was assessed at our center on 04-09-2025. The evaluation revealed that he previously demonstrated **information processing delays and developmental delays related to genetic variants**. However, he has **improved greatly on the first protocol**, with many of his earlier symptoms now resolved. These positive changes indicate a **high readiness for continued improvement** and strong potential for further progress with sustained interventions.

Recommended Plan

1) Development Protocol for the Information Processing

- Continue a **4-month structured developmental protocol**.
- Conduct a **reevaluation after 4 months**, preferably in person.
- Establish a **baseline** during reevaluation to track measurable progress.
- Continue and adapt the intervention plan as necessary.

2) Main Recommended Analyses (through Neurazon – Canada)

Recommended to repeat every 6–12 months:

The recommended analyses are provided through **Neurazon (Canada)**. These are **recommendations, not obligatory**, and are **not conducted directly through our centers**. They are intended to complement therapy by providing additional insights into the child's developmental profile.

Please refer to their report and assessment.

3) Therapy

- **Neuroplasticity Rehabilitation Therapy:** Intensive therapy to begin immediately, as the child is now ready.
- Therapy should focus on **enhancing cognitive processing, language, and adaptive developmental skills** to build on the strong improvements already achieved.

Conclusion

Abdulaziz has shown **substantial improvement following the first protocol**, with many of his prior challenges resolved. His readiness for intensive therapy and positive developmental trajectory strongly support the continuation of his intervention plan. With consistent support, there is a high likelihood of achieving further significant progress. A **reevaluation in 4 months** is essential to adjust the plan as needed.

Notes on External Testing

The recommended analyses are provided through **Neurazon (Canada)**. These are **recommendations, not obligatory**, and are **not conducted directly through our centers**. They are intended to complement therapy by providing additional insights into the child's developmental profile.

Disclaimer

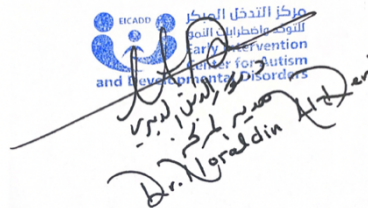

This assessment is **not a final diagnosis** but a developmental evaluation based on current findings. Abdulaziz is **capable of continued improvement**, and results may change with intervention and progress. The recommended tests are external and provided through Neurazon (Canada). These are **suggestions only**, designed to support a deeper understanding of his developmental needs.
