

Director's Report on Developmental Progress Assessment

Date of Visit: February 11, 2025

Child's Name: Yousef Sahl

Date of Birth: October 18, 2018

Overview:

Yousef Sahl visited our center for a developmental progress assessment. During the evaluation, Yousef exhibited **information processing delays** and **acquired autism features** associated with **potential regression in intellectual developmental delays**. This indicates a need for further assessment to better understand the underlying causes and develop an appropriate intervention plan.

Recommendations:

1. **Development Non-Medicinal Protocol for Information Processing**
 - Implement the protocol for **4 months**, followed by a reevaluation of Yousef's progress, preferably in person.
 - Establish a developmental baseline and adjust the plan as needed based on progress.
 - Continue with the intervention plan after reevaluation.
2. **Main Recommended Analysis:**
 - **Precision Health Analysis – Neurazon (Canada)**
 - A comprehensive analysis to identify possible causes.
 - **Sample Required:** Saliva
 - **Processing Time:** 4 months (business days)
 - **Frequency:** Repeated after 12 months
 - **Neuronal Growth Factors Absorption Analysis Screening – Neurazon (Canada)**
 - A detailed assessment of neuronal growth factors absorption.
 - **Sample Required:** Hair
 - **Processing Time:** 2 months (business days)
 - **Frequency:** Repeated every 6–12 months
 - **Functional Pathway Analysis – Neurazon (Canada)**
 - A thorough analysis of functional pathways to explore underlying causes.
 - **Sample Required:** Urine
 - **Processing Time:** 2 months (business days)
 - **Frequency:** Repeated after 12 months
3. **Recommended Therapy:**
 - **Technological Sessions Online** to support cognitive development and enhance information processing skills.

END OF REPORT

Follow-Up Plan:

It is essential to reassess Yousef after the initial 4-month period to monitor progress and update the intervention plan accordingly.

Conclusion:

This assessment serves as a developmental progress evaluation. Yousef is capable of improvement with the appropriate interventions and assessments. The recommendations are provided as suggestions and should be followed based on clinical guidance and family decision-making.

While **autism is not indicated**, the identified **information processing delays** require **targeted interventions** and **further analysis** to optimize the child's cognitive and developmental growth. Regular reassessments and adherence to the recommended therapy and dietary interventions will be crucial for ensuring progress.
