
Director's Report on Developmental Progress Assessment

Date of Visit: 12-10-2025

Child's Name: Ziyad Yahya Al Hinai

Date of Birth: 24-11-2020

Gender: Male

Guardian: Yahya

Overview:

Ziyad Yahya Al Hinai visited our center for a developmental progress assessment. The evaluation revealed **information processing delays and developmental delays**, which have led to **acquired features of autism** and **features of intellectual developmental delay**.

These findings suggest that the child's brain development and information integration functions are progressing at a slower pace than expected for his age. The assessment also indicates that further analysis is required to determine the underlying biochemical and neurological contributors to these developmental patterns.

Recommended Plan:

EICADD

1) Development Protocol for Information Processing

- Continue with the individualized **development protocol** for **4 months**, followed by a re-evaluation (preferably in person).
 - Establish a **developmental** baseline to measure and track improvement over time.
 - Maintain consistent intervention and structured support between sessions.
-

2) Recommended Tests (through Neurazon – Canada)

The recommended tests are conducted through **Neurazon (Canada)**, a bioinformatics company partnered with certified laboratories worldwide. Please refer to the plan provided by Neurazon for further information. These tests are **external and not performed directly through our center**. They are **recommendations**, not obligations, designed to support a deeper understanding of the child's developmental and physiological profile.

3) Recommended Therapy (after determining the causes)

- **Neuroplasticity Therapy (Intensive):** To be introduced in **later stages**, once the child is ready and sufficient developmental stability is achieved.
- **Rehabilitation Therapy and School:** Continue consistent rehabilitation and structured schooling to promote learning, communication, and adaptive behaviors.

Notes on External Testing:

The recommended tests are conducted through **Neurazon (Canada)**, a bioinformatics company partnered with certified laboratories worldwide. Please refer to the plan provided by Neurazon for further information. These tests are **external and not performed directly through our center**. They are **recommendations**, not obligations, designed to support a deeper understanding of the child's developmental and physiological profile.

Disclaimer:

This assessment is **not a final diagnosis** but a developmental evaluation based on current observations. The child is open to improvement, and findings may change with progress and intervention. The report remains valid for **four months** from the date of assessment.

This report is valid for 4 months from the date of assessment.
