for Autism and Developmental Disorders

Director's Report on Developmental Progress Assessment

Date of Visit: 24-06-2025 Child's Name: Tym Ounallah Date of Birth: 21-04-2023

Overview:

Tym Ounallah was assessed at our center on the date above. The child has shown **notable improvement** since initial evaluation. Based on the **Precision Health Analysis conducted through Neurazon (Canada)**, no genetic factors linked to autism spectrum disorders were identified. The findings support that Tym is **not a case of autism**, but presents with **information processing delays** and **simple developmental delays**, which remain manageable with appropriate intervention.

Recommended Plan:

- 1. Development Protocol for Information Processing:
 - o Initiate or continue tailored developmental therapy for 4 months.
 - o Reassess the child's status in person after 4 months.
 - Establish an updated developmental baseline.
 - o Continue with an adjusted intervention plan as needed.
 - o Maintain close follow-up for developmental milestones.

Recommended Tests:

• Recommended through Canada:

Please refer to their report and assessment. These reports are not done at EICADD.

Disclaimer:

This assessment is not a final medical diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and the findings may change with progress and intervention. The recommended tests are external and provided through Neurazon (Canada). These are suggestions, not obligatory, and are intended to support a deeper understanding of the child's developmental profile. Please refer to the plan provided by Neurazon for further information. These tests are not conducted directly through our center.
