

EICADD Center Ajman

Director's Developmental Progress Assessment Report

Date of Visit: 19-11-2025

Child's Name: arakel-ishkan, khashikan

Date of Birth: 03-02-2022

Gender: Male

Guardian: n/a

Overview

Khashikan visited our center for a developmental progress assessment. During the evaluation, he presented with **Information Processing Delays** and **global developmental delays**, which are contributing to **acquired features of autism**. These delays are affecting his ability to process, integrate, and respond to information efficiently, influencing communication, learning, and behavioral development. The child doesn't score as a case of classical true autism.

The child requires targeted, structured, and timely intervention. This assessment is not a final diagnosis but reflects his developmental status at this stage. With appropriate therapy and consistent support, improvement is expected.

Recommended Plan

1. Development Protocol for Information Processing

- Apply the protocol for **4 months**, followed by reevaluation **preferably in person**.
- Reassess the plan and establish a detailed **baseline** during the next visit.
- Continue the developmental intervention plan to enhance processing abilities and developmental milestones.

2. Main Recommended Analyses (Through Neurazon – Canada)

The recommended tests are conducted through Neurazon (Canada), a bioinformatics company partnered with certified laboratories worldwide. These tests are external, optional, and not conducted directly through our centers. Please refer to the plan provided by Neurazon for further information.

3. Recommended Therapy

A. Rehabilitation Therapy

- **Occupational Therapy (OT)**
- **Speech Therapy (ST)**

Therapies should continue consistently to strengthen communication, sensory processing, motor planning, and cognitive development.

B. Plasticity Rehabilitation Therapy

- To be initiated in **later stages**, once readiness is confirmed.
- Not suitable at this stage until foundational processing abilities improve.

Notes on External Testing

All recommended analyses above are conducted **only through Neurazon (Canada)**, a bioinformatics center partnered with internationally accredited laboratories. These tests are intended to provide deeper insights but are **not obligatory**.

Conclusion

This assessment is **not a final diagnosis** but a developmental evaluation based on current observations. Khashikan is capable of improvement, and developmental progress is expected with consistent intervention and adherence to the recommended plan.

Disclaimer

This assessment is valid for **4 months** from the date of evaluation.

The child is open to improvement, and findings may change with progress.

The recommended tests are external, optional, and performed exclusively through **Neurazon (Canada)**.

Centers' Leading Staff:

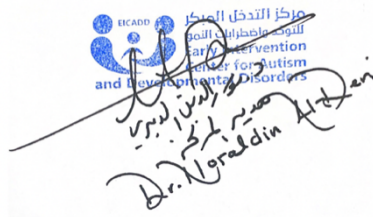

Speech Therapist: Ms. Amira Alomari

Occupational Therapist: Ms. Malak Jaber

Psychologist and behaviour therapist (Ajman): Ms. Asmaa Alshanawi
