

**Director's Report on Developmental Progress Assessment**

**Date of Visit:** 28-04-2025

**Case Name:** Rayan Khalaf Khaled

**Date of Birth:** 09-10-2017

**Gender:** Female

**Guardian:** Khalaf

Assessment

Rayan was assessed in person at our center on 28-04-2025.

The evaluation findings revealed:

- The child has **improved** following the first phase of the developmental intervention protocols.
- The child continues to present with **Information Processing Delays** and **Intellectual Developmental Delays**.
- **Acquired features of Autism** were also observed, highlighting challenges particularly in cognitive flexibility and adaptive behaviors.
- **Behavioral delays** remain significant and indicate the need for **intensive behavioral therapy** to support emotional regulation, attention control, and social interaction development.

This assessment provides a developmental and functional analysis for therapy planning purposes and is not a final medical diagnosis.

Rayan shows potential for meaningful developmental progress with a structured and consistent intervention plan.

Recommended Plan

1) Development Protocol for Information Processing

- Continue targeted interventions focusing on enhancing cognitive processing, executive function, social communication, and behavioral regulation.
- **Duration:** 4–6 months
- **Reevaluation:** Preferably in person after completing the intervention phase to reassess developmental progress and establish a new therapy baseline.
- **Goal:** Improve cognitive efficiency, behavioral adaptation, and social interaction skills.
- **Therapy Focus:**
  - **Light Therapy Sessions:**
    - 1–2 sessions per week
    - Aimed at supporting neuronal activation, mood regulation, and improving cognitive responsiveness.

## 2) Recommended Tests

- **Future Testing Considerations:**

No further analysis is required at this time.

Additional functional or genetic testing may be reconsidered based on the child's progress during the upcoming months.

## Follow-Up Plan

- **Reassessment:**

Scheduled after 4–6 months of consistent therapy to evaluate cognitive, behavioral, and adaptive functioning improvements.

- **Continuous Monitoring:**

Documentation of therapy outcomes, behavioral observations, and parental feedback will guide any necessary therapy adjustments.

- **Important Note:**

This evaluation is intended for developmental and therapeutic planning and does not substitute for a medical diagnosis.

A structured multidisciplinary approach remains crucial for maximizing Rayan's developmental potential.
