

## EICADD Center Ajman

### Director's Report on Developmental Progress Assessment

**Date of Visit:** 16-12-2025

**Child's Name:** Mohammed-Anwar Almukhtar

**Date of Birth:** 22-03-2021

**Gender:** Male

**Guardian:** Anwar

#### Overview

Mohammed-Anwar Almukhtar attended a developmental progress assessment at EICADD Center Ajman. The assessment indicates **information processing delays** and **global developmental delays**, with features of **hyperlexia between Type 2 and Type 3**, leading to **minor acquired features of autism**. At this stage, the child **does not meet scoring criteria as an autism case**, however he requires continued intervention to support development and reduce the risk of progression of acquired developmental features. Further analysis is recommended to better understand contributing factors and guide a more targeted plan.

#### Recommended Plan

##### 1) Development Protocol

- Implement a **structured development protocol targeting information processing** for **4 months**, then **reevaluate**, preferably **in person**.
- During reevaluation, the plan will be reviewed and a **clear baseline** will be established to measure progress and guide the next stage.
- **Continue with the intervention plan** consistently during this period.

##### 2) Recommended Therapy

After determining the contributing causes based on assessment findings and test results, the following is recommended:

- **Plasticity rehabilitation therapy (OT), intensive**, to **start as soon as possible**, based on availability and the child's readiness for an intensive schedule.

## Notes on External Testing

The recommended tests are conducted through **Neurazon (Canada)**, a bioinformatics company partnered with certified laboratories worldwide. Please refer to the plan provided by Neurazon for further information. Please note that these are recommendations and not obligatory, and they are not conducted through our centers directly.

## Disclaimer

This assessment is not a final diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and the findings may change with progress and intervention. The recommended tests are external and provided through Neurazon (Canada). These are suggestions, not obligatory, and are intended to support a deeper understanding of the child's developmental profile. Please refer to the plan provided by Neurazon for further information. These tests are not conducted directly through our center. This report is **valid for 4 months** from the date of assessment.

## Legal and Official Use Notice

This report is a **developmental assessment only** and is **not valid for legalization, governmental, judicial, or official identification purposes**. In the **United Arab Emirates, only the Zayed Higher Organization for People of Determination** is authorized to issue official case or diagnostic reports for **People of Determination** identification or other official uses. This report is intended solely for assessment and guidance purposes.
