

## EICADD Center Ajman

### Director's Report on Developmental Progress Assessment

**Date of Visit:** 10-11-2025

**Child's Name:** Karam-Faud Alshare

**Date of Birth:** 13-12-2021

**Gender:** Male

**Guardian:** Faud

---

### Overview:

Karam-Faud Alshare visited our center for a developmental progress assessment. The child has shown **significant improvement on the first protocol**, demonstrating progress across multiple developmental domains.

The evaluation indicates that Karam has **information processing delays** and **developmental delays** that are linked to **genetic variants affecting developmental pathways**, as identified in a previous **Precision Health Analysis conducted externally**. These factors have contributed to **acquired features of autism**, which have been improving through continuous intervention and therapy.

The child's developmental trajectory remains positive, and his response to intervention suggests **high neuroplastic potential** and **ongoing progress** with the current plan.

---

### Recommended Plan:

#### 1) Development Protocol for Information Processing

- Continue with the current **developmental protocol** for 4 months, followed by a **reevaluation**, preferably conducted in person.
- Reassess the progress and establish a **new developmental baseline**.
- Continue with the **current intervention plan**, adjusting as needed to target ongoing areas of improvement.

---

#### 2) Recommended Tests through Neurazon (Canada):

The recommended tests are conducted through **Neurazon (Canada)**, a bioinformatics company partnered with accredited international laboratories. These tests are **external, not obligatory**, and **not conducted directly through our center**. Parents are encouraged to follow the plan

provided by Neurazon for further details regarding sample collection, processing, and reporting timelines.

### 3) Recommended Therapy:

- **Rehabilitation Therapy:** Continue with **Plasticity Therapy** at an **intensive level** to reinforce neurodevelopmental and cognitive progress.
- Maintain **multidisciplinary support**, including **occupational and behavioral therapy**, as complementary components to the plasticity plan.

### Notes on External Testing:

The recommended tests are conducted through **Neurazon (Canada)**, a bioinformatics company partnered with accredited international laboratories. These tests are **external, not obligatory**, and **not conducted directly through our center**. Parents are encouraged to follow the plan provided by Neurazon for further details regarding sample collection, processing, and reporting timelines.

### Disclaimer:

This assessment is a developmental evaluation based on current observations and intervention progress. It does **not represent a final diagnosis**. The child is capable of further improvement, and outcomes may **change with** ongoing therapy and reassessment. The recommended tests are external and intended to provide deeper insight into developmental progress. This report remains **active for 4 months** from the date of assessment.

### Centers' Leading Staff:

**Speech Therapist:** Ms. Amira Alomari

**Occupational Therapist:** Ms. Malak Jaber

**Psychologist and behaviour therapist (Ajman):** Ms. Asmaa Alshanawi

**EICADD Center Director**

Dr. Noraldin Al-Dan
