Director's Report on Developmental Progress Assessment

Date of Visit: 14-08-2025

Child's Name: Faris Ehab A Alatassi

Date of Birth: 22-06-2022

Overview:

Faris Ehab A Alatassi visited our center for a developmental assessment. The evaluation revealed **information processing delays** and **developmental delays** leading to **hyperlexia features closer to Hyperlexia Type 2** (acquired features of high-functioning autism). The assessment also indicated a **high risk for epileptic abnormal activity**, based on both the current evaluation and previous assessments. Further analysis is required to determine the underlying causes and to establish a comprehensive intervention plan.

Recommended Plan:

1. **Development Protocol for Information Processing**
 - Implement for 4 months, followed by an in-person reassessment.
 - Reevaluate the plan and establish a developmental baseline.
 - Continue with the intervention plan based on progress.
2. **Recommended Tests (through Neurazon, Canada):**
 - Please refer to their report and assessment. These analyses are not done at EICADD.
3. **Recommended Therapy (after determining the causes):**
 - **Neuroplasticity Therapy – Intensive:** To be initiated in later stages once the child is ready for intensive intervention.

Disclaimer:

This assessment is not a final diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and the findings may change with progress and intervention. The recommended tests are external and provided through Neurazon (Canada). These are suggestions, not obligatory, and are intended to support a deeper understanding of the child's developmental profile. Please refer to the plan provided by Neurazon for further information. These tests are not conducted directly through our center.
