

Director's Report on Developmental Progress Assessment

Date of Visit: 27-04-2025

Case Name: Iyas Abusubaih

Date of Birth: 06-04-2017

Gender: Male

Guardian: Iyad

Assessment

Iyas visited our center for a developmental evaluation on 27-04-2025.

The assessment findings revealed:

- **Information Processing Delays**
- **Developmental Delays**
- **Acquired minimal features of Autism**, but the child does **not meet the criteria** for a formal diagnosis of Autism Spectrum Disorder.

The child was assessed **in person**.

Further comprehensive analysis is recommended to better understand the underlying causes and optimize the intervention plan.

This assessment is for developmental and functional analysis purposes and is not a medical diagnosis. Iyas has the potential for meaningful improvement with structured, early intervention.

Recommended Plan

1) Development Protocol for Information Processing

- Initiate structured therapy targeting cognitive processing, sensory integration, and functional communication skills.
- **Duration:** 4 months
- **Reevaluation:** Preferably in person after 4 months to assess developmental progress and establish a new baseline.
- **Goal:** Enhance information processing efficiency, language development, and adaptive functioning.

2) Main Recommended Analysis

- **Precision Health Analysis (through Neurazon – Canada):**
A detailed comprehensive genetic and metabolic evaluation to investigate potential underlying causative factors.
Sample: Saliva
Turnaround Time: 4 months business days.

- **Gut Intolerance Analysis (through Neurazon – Canada):**
Screening to assess food intolerances or gut dysfunctions that could impact cognitive, behavioral, and developmental outcomes.
Sample: Hair
Turnaround Time: 2 months business days.
Frequency: Repeated every 6–12 months based on clinical need.

3) Main Recommended Therapy

- **Occupational Therapy Plan:**
 - Focus on sensory integration, fine motor skills, self-regulation strategies, and classroom readiness skills.
- **Speech Therapy Plan:**
 - Focus on improving receptive and expressive communication, social communication, and language comprehension.
- **Technology Therapy:**
 - Incorporate supportive sensory and cognitive stimulation technologies, including:
 - Light therapy
 - Sensory-based stimulation tools
 - Communication-enhancing technologies

Follow-Up Plan

- **Reassessment:**
After completion of the 4-month developmental protocol to reassess cognitive, sensory, and functional progress and adapt the intervention plan as necessary.
- **Continuous Monitoring:**
Documentation of therapy session outcomes, therapist feedback, and parental observations will support continuous adjustment of the intervention.
- **Important Note:**
This assessment is developmental and functional in nature and does not substitute a final medical diagnosis. Ongoing improvements are expected with adherence to the structured, individualized intervention plan.
