

Date of Assessment: 25-06-2025

Child's Name: Amir Sabri

Date of Birth: 2022-01-02

Age: 29 months

Gender: Male

Guardian: Sahar

Assessment Summary:

Amir was assessed on 25-06-2025. He presents with **information processing delays** and **developmental delays** that are leading to **hyperlexia**, closer to **Hyperlexia Type 1**, though not fully developed into a defined hyperlexia subtype. These delays have caused **acquired features of autism**, but he **does not meet the diagnostic criteria for autism** at this time. Additional evaluations are recommended to better understand the underlying causes.

Recommended Plan:

1. Development Protocol for Information Processing

- Initiate a tailored, non-medicinal developmental protocol.
- Reevaluate after **4 months**, preferably in person.
- Establish a new baseline and adapt the plan as needed.
- Continue the protocol based on progress.

2. Recommended Tests (through Neurazon – Canada):

Disclaimer: These tests are not performed at EICADD. Please refer to the official report and recommendations provided by **Neurazon (Canada)**. These suggestions are external and optional, intended to complement the intervention plan.

Disclaimer:

This assessment is not a final medical diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and the findings may change with progress and intervention. The recommended tests are external and provided through Neurazon (Canada). These are suggestions, not obligatory, and are intended to support a deeper understanding of the child's developmental profile. Please refer to the plan provided by Neurazon for further information. These tests are not conducted directly through our center.

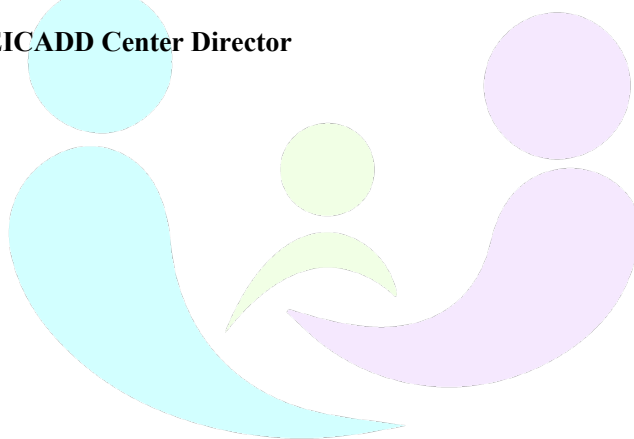

Centers' Leading Staff:

Speech Therapist: Ms. Amira Alomari

Occupational Therapist: Ms. Malak Jaber

Psychologist and behaviour therapist (Ajman): Ms. Asmaa Alshanawi
