

**Director's Report on Developmental Progress Assessment**

**Date of Visit:** 30-04-2025

**Child's Name:** Salsabeel Alaa Abyayyash

**Date of Birth:** 18-08-2020

**Assessment Summary:**

The child presents with **information processing delays** and **developmental delays** only. Based on the evaluation conducted in person, the child **does not meet the criteria for autism**, but benefits from structured intervention to support continued developmental progress. Further analysis may be necessary depending on response to therapy.

**Recommended Plan:**

**1. Development Protocol for Information Processing:**

- Duration: **4 months**
- Child to be reevaluated at the end of the period, preferably in person
- Goal: Establish a baseline and monitor improvement through structured intervention
- **Rehabilitation Therapy** to include:
  - **2 Speech Therapy (ST) sessions per week**
  - **2 Occupational Therapy (OT) sessions per week**

**2. Recommended Tests:**

- No immediate testing required
- Further tests may be recommended if the child does not show improvement in the upcoming period

**Conclusion:**

This report is a **developmental assessment** only and not a medical diagnosis provided for research and early intervention planning purposes. The child is capable of meaningful progress with continued therapy. All recommendations are given in alignment with Neurazon's structured protocols and may be updated based on future assessments.

**Director**
