

## EICADD Center – Developmental Progress Assessment Report

### Director's Developmental Progress Assessment Report

**Date of Visit:** 02-11-2025

**Child's Name:** Abdullah Ammar Alkadawi

**Date of Birth:** 2015-09-28

**Gender:** Male

**Guardian:** Ammar

### Overview

Abdullah attended our center for a developmental assessment. The evaluation indicates **information processing delays and developmental delays** that have resulted in features consistent with **hyperlexia, closer to Hyperlexia Type 3 but not fully there yet**. The child **does not score as a case of autism**, but presents advanced word recognition alongside challenges in comprehension, social-communication consistency, and higher-order cognitive processing.

The child remains open for improvement, and continued intervention is recommended. Further analysis is advised to better understand the biological contributors to development.

### Recommended Plan

#### 1) Development Protocol for Information Processing

- Continue structured neuro-developmental protocol for **4 months**
- Preferably re-evaluation in person
- Re-assess progress and establish baseline for next phase
- Continue with current intervention plan and monitor response

#### 2) Recommended Analyses Through Neurazon (Canada)

The above recommended analyses are conducted **through Neurazon (Canada)**, a bioinformatics company partnered with accredited laboratories internationally.

These tests are **optional** and are **not done directly through EICADD**.

They are suggested to support deeper insight into biological contributors to development and to refine intervention planning if needed.

### 3) Recommended Therapy

- **Plasticity rehabilitation therapy:** 2–3 sessions per week
- Continued supportive developmental therapy as needed

### Notes on External Testing

The above recommended analyses are conducted **through Neurazon (Canada)**, a bioinformatics company partnered with accredited laboratories internationally.

These tests are **optional** and are **not done directly through EICADD**.

They are suggested to support deeper insight into biological contributors to development and to refine intervention planning if needed.

### Disclaimer

This assessment is a **developmental evaluation** based on current clinical observations.

It is **not a final diagnosis**, and findings may evolve based on the child's development and intervention response.

The child is capable of improvement, and the assessment remains **open to change** with progress.

The recommended tests are external and provided through Neurazon (Canada); they are **not obligatory** and **not conducted through our center**.

This report is valid for **4 months** from the date of assessment.
