

## EICADD Center Ajman

### Director's Report on Developmental Progress Assessment

**Date of Visit:** 17-09-2025

**Child's Name:** Ahmed-Faris Harbawi

**Date of Birth:** 23-09-2021

**Age:** 4 years

**Gender:** Male

**Guardian:** Tareq

### Overview

Ahmed-Faris visited our center for a developmental progress assessment. The evaluation showed signs of **information processing delays and developmental delays**, which have led to **acquired features of autism**. However, it is important to note that he does **not score as a case of autism**.

The assessment also revealed a **regressive developmental delay episode**, which may suggest potential **biological causes**. Additionally, family history is relevant: Ahmed-Faris has a sister with developmental delays, which raises the possibility of a **hereditary component**. This needs further investigation, as **no prior physical or medical assessments** have been conducted by a physician.

Ahmed-Faris requires **further analyses** to better understand the underlying causes and to create a more tailored plan.

### Recommended Plan

#### 1. Development Protocol for Information Processing

- Implement a structured intervention plan over the next **4 months**.
- Reevaluate the child, preferably **in person**, to establish a clear baseline.
- Continue adjusting and supporting the intervention protocol as needed.

#### 2. Recommended Tests through Neurazon (Canada)

*Please refer to the plan provided by Neurazon for further information. Please note that these are recommendations and not obligatory, and they are not conducted through our centers directly. Please refer to their own report and assessment.*

### 3. Recommended Therapy

- **Plasticity Rehabilitation Therapy:** 2–3 sessions per week

### Conclusion

This assessment does not represent a final diagnosis but rather a developmental evaluation. Ahmed-Faris is capable of improving with proper intervention, and the findings may change as he progresses.

### Disclaimer

This assessment is not a final diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and the findings may change with progress and intervention. The recommended tests are external and provided through Neurazon (Canada). These are suggestions, not obligatory, and are intended to support a deeper understanding of the child's developmental profile. Please refer to the plan provided by Neurazon for further information. These tests are not conducted directly through our center.

### Center's Leading Staff:

**Speech Therapist:** Ms. Amira Alomari

**Occupational Therapist:** Ms. Malak Jaber

**Psychologist and behaviour therapist:** Ms. Asmaa Alshanawi

**EICADD Center Director**

Dr. Noraddin Ahmed Faris
