

Director's Report on Developmental Progress Assessment

Date of Visit: 10-05-2025

Child's Name: Ali Hasan

Date of Birth: 21-06-2021

Age: 3 years

Gender: Male

Guardian: Zainab

Overview:

Ali Hasan returned for follow-up evaluation after undergoing the initial developmental intervention protocol. He has shown **significant improvement**, demonstrating positive responses to the initial plan. However, the child continues to exhibit **information processing delays and broader developmental delays**, which are linked to **genetic variants identified in prior analyses**.

These challenges remain manageable and show good potential for further improvement through continued tailored intervention and guided therapy.

Recommended Plan:

1. Developmental Protocol for Information Processing

- Continue with a structured, non-chemical developmental protocol over the next 4 months.
- Child should be **reassessed after 4 months**, preferably in person, to evaluate progress.
- Establish a new developmental baseline and adjust the plan according to observed improvements.

2. Recommended Tests through Neurazon (Canada): Please refer to plan provided by neurazon for further information. Please note that these are recommendations and not obligatory and are not done through our centers directly.

Conclusion:

Ali Hasan is making measurable progress and has shown responsiveness to personalized intervention. Continued focus on enhancing information processing and correcting underlying physiological imbalances will be essential. This is not a final medical diagnosis but a developmental analysis, and the child should be **reassessed regularly** to guide and refine future treatment strategies.

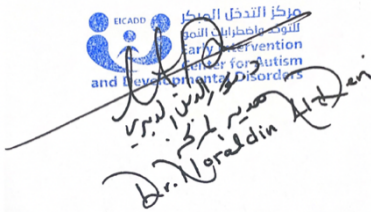

Center's Leading Staff:

Speech Therapist: Ms. Amira Alomari

Occupational Therapist: Ms. Malak Jaber

Psychologist and behaviour therapist: Ms. Asmaa Alshanawi

EICADD Center Director

Dr. Noraldin Al-Dan
