

Director's Report on Developmental Progress Assessment

Date of Visit: 27-08-2025

Child's Name: Saif Loay Al-taani

Date of Birth: 26-05-2020

Age: 5 years 3 months

Gender: Male

Guardian: Loay

Overview

Saif was assessed at our center for developmental progress. The evaluation revealed **information processing delays** and **developmental delays**, which have contributed to **hyperlexia closer to Hyperlexia Type 2**. This presentation is often associated with **features of high-functioning autism**. In addition, Saif shows **behavioral delays** that require close monitoring and structured intervention. The child remains open to improvement but requires further analyses to clarify underlying causes and to guide tailored intervention strategies.

Recommended Plan

EICADD

1. Development Protocol for Information Processing

1. Continue with a structured developmental protocol to support information processing.
2. Duration: 4 months, followed by reevaluation (preferably in person).
3. Establish a new baseline during reevaluation to refine interventions.
4. Continue with the intervention plan consistently.

2. Main Recommended Analyses (Through Neurazon, Canada)

The recommended analyses are carried out through **Neurazon (Canada)**. These are external and not performed directly at our centers. Results will be reviewed and integrated into the child's developmental plan once available. Please refer to their report and assessment.

3. Therapy

- **Speech Therapy (ST):** 2 sessions per week.
- **Occupational Therapy (OT):** 2 sessions per week.

Conclusion

This assessment confirms that Saif presents with information processing and developmental delays, leading to hyperlexia features closer to Hyperlexia 2 and high-functioning autism traits, along with behavioral delays. With consistent therapy, structured protocols, and advanced analyses, Saif remains open for significant developmental progress.

Notes on External Testing

The recommended analyses are carried out through **Neurazon (Canada)**. These are external and not performed directly at our centers. Results will be reviewed and integrated into the child's developmental plan once available.

Disclaimer

This assessment is not a final diagnosis but a developmental evaluation based on current findings. The child is open to improvement, and findings may evolve with consistent therapy, further analyses, and reassessment. The recommended external tests are suggestions and not obligatory.
