

## Director's Report on Developmental Progress Assessment

**Date of Visit:** 25-08-2025

**Child's Name:** Zain Abo Ayn Adelbi

**Date of Birth:** 2019-04-15

**Gender:** Male

**Guardian:** Abo Ayn

---

### Overview

Zain was assessed for developmental functioning. Findings indicate **information processing delays** and broader **developmental delays** that have led to **intellectual developmental delay features** with **acquired features of autism**. **Further analyses** are recommended to clarify contributing biological factors and to optimize the intervention plan.

---

### Recommended Plan

#### 1) Development Protocol for Information Processing

- Implement a structured protocol for **4 months** (attention, working memory, comprehension, processing speed).
- **Reevaluate in person** after 4 months to establish a clear baseline and adjust goals.
- Continue and adapt the intervention according to measured progress.

#### 2) Main Recommended Analyses (through Canada – Neurazon)

The tests are provided through **Neurazon (Canada)**. They are **recommendations, not obligatory**, and are **not conducted directly through our center**. Please refer to their report and assessment.

#### 3) Therapy

- **Neuroplasticity Rehabilitation Therapy** in **later stages**; the child is **not ready** for an intensive program at present. Timing to be reconsidered after the 4-month review and baseline establishment.
- Parent-guided home routines (15–20 minutes daily) to reinforce attention, language enrichment, sequencing/turn-taking games, and self-regulation strategies.

## Conclusion

This document reflects a developmental assessment. Zain is **capable of improvement** with consistent therapy, family engagement, and the recommended analyses. Findings may evolve with progress and at the next in-person reassessment.

## Notes on External Testing

The above tests are provided through **Neurazon (Canada)**. They are **recommendations, not obligatory**, and are **not conducted directly through our center**.

## Disclaimer

This assessment is **not a final diagnosis** but a developmental evaluation based on current observations. The child is open to improvement, and findings may change with progress and intervention.
