

## Ostathna Center – Jordan

## Developmental Progress Assessment Report

Date of Visit: 28-09-2025

Child's Name: Mariam Ahmad Abu Khadra

Date of Birth: 13-12-2019

Age: 5 years, 9 months

Gender: Female

Guardian: Ahmad

## Overview

Mariam Ahmad Abu Khadra visited **Ostathna Center – Jordan** for a developmental progress assessment.

The evaluation shows that **Mariam has improved greatly on the first intervention protocol**, demonstrating progress in attention, receptive communication, and adaptive behavior.

At present, **she does not meet the criteria for Autism Spectrum Disorder or ADHD.**

Mariam is **capable of enrolling in a mainstream classroom environment** with continued developmental and therapeutic support.

While her overall progress is encouraging, **Mariam continues to present with information-processing delays and general developmental delays**, requiring ongoing intervention to strengthen foundational skills and ensure sustained improvement.

## Recommended Plan

## 1. Development Protocol for Information Processing

- Continue the **information-processing development protocol for 4 months.**
- **Re-evaluate after 4 months**, preferably in person, to establish a new baseline and adjust the plan as needed.
- Maintain **structured home-based follow-up** to reinforce progress achieved in therapy.

## 2. Recommended Therapy

- **Mitotherapy:** 1 session per week to support cellular energy and optimize neurodevelopmental pathways.
- **Speech-Language Therapy & Occupational Therapy:** targeted sessions to enhance receptive-expressive language, sensory-motor integration, and school-readiness skills.

## Notes on External Testing

If further biomedical insights are desired, the family may consider **specialized external analyses** through **Neurazon (Canada)** such as precision health or neuronal growth factors screening.

These analyses are **external services provided through Neurazon (Canada), a bioinformatics company partnered with certified international laboratories.** The recommendations are **not obligatory** and are **not conducted directly by Ostathna or EICADD.**

## Conclusion

Mariam has made **notable gains in her development** and is ready to benefit from a **classroom setting** with continued therapy support.

The proposed **4-month developmental protocol, weekly mitotherapy, and ongoing speech-language/occupational therapy** are expected to consolidate her progress and further strengthen her developmental skills.

## Disclaimer

- This report is a **developmental assessment, not a medical diagnosis.**
- The child's profile remains **open to improvement**; findings may evolve with continued intervention.

- The report is **issued by Ostathna Center – Jordan** and remains **valid for 4 months** from the assessment date.
- Parents are encouraged to follow the recommended plan and attend all reassessments to ensure optimal outcomes.

*This report is valid for 4 months from the date of assessment.*
