**Director's Report on Developmental Progress Assessment**

**Date of Visit:** 02-08-2025

**Child's Name:** Ameer-Mohammad Abdallah

**Date of Birth:** 08-04-2019

**Age:** 6 years

**Gender:** Male

**Guardian:** Mohammad

---

**Overview:**

Ameer-Mohammad Abdallah was assessed at our center for developmental progress. The evaluation shows **information processing delays and developmental delays**, resulting in **acquired features of autism**.

It is noted that the child has a **twin brother with typical development**, indicating that the **cause of the delays is primarily biological rather than environmental**. The child is capable of improvement with targeted interventions, and **further analyses are needed** to better understand the underlying causes and optimize the rehabilitation plan.

**Recommended Plan:**

1. **Development Protocol for Information Processing**
  - Continue for 4 months, followed by in-person reassessment.
  - Reevaluate the plan and establish a new baseline.
  - Continue with the intervention plan according to progress.
2. **Recommended Analyses through Neurazon (Canada):**

**Please refer to their report and assessment. These analyses are not done at EICADD.**

3. **Recommended Therapy:**
    - **2 Speech Therapy (ST) sessions per week**
    - **2 Occupational Therapy (OT) sessions per week**
    - **2 Mitotherapy sessions (Long-Term)**
- 

**Disclaimer:**

This assessment is not a final diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and findings may change with progress and intervention. The recommended tests are external and provided through Neurazon (Canada). These are suggestions, not obligatory, and are intended to support a deeper understanding of the child's developmental profile. Please refer to the plan provided by Neurazon for further information. These tests are not conducted directly through our center.
