
Director's Report on Developmental Progress Assessment

Date of Visit: 24-07-2025

Child's Name: Kareem Al Bardini

Date of Birth: 29-04-2021

Age at Visit: 4 years and 3 months

Gender: Male

Guardian's Name: Anas

Overview:

Kareem Al Bardini was assessed at our center on July 24th, 2025. The child has shown significant improvement following the initial developmental intervention protocol. Most of the previously observed acquired features resembling autism have improved or resolved. However, Kareem still presents with developmental delays and challenges in information processing, now primarily manifesting as hyperactivity and features commonly seen in ADHD.

At this stage, Kareem does not meet the diagnostic criteria for Autism Spectrum Disorder or Attention Deficit Hyperactivity Disorder. However, further monitoring and structured intervention remain essential to support continued improvement and to prevent regression.

Recommended Plan

1. **Development Protocol for Information Processing:**
 - **Duration:** 4 months
 - **Goal:** Strengthen attention, impulse control, and cognitive processing
 - **Follow-Up:** Reevaluate the child in person to measure outcomes and adjust the plan as needed
 2. **Recommended Therapy:**
 - **Neuroplasticity Rehabilitation Therapy**
 - Begin with foundational sessions and gradually progress to intensive therapy as the child becomes more responsive
 - Focus areas: cognitive control, attention span, and adaptive functioning
-

Recommended Tests through Neurazon (Canada)

Please refer to the plan provided by Neurazon for further information. Please note that these are recommendations and not obligatory, and they are not conducted through our centers directly.

Follow-Up Plan:

- **Reassessment Interval:**

The child should be reassessed after 4 months to track developmental progress and ensure continued improvement with tailored support.

Disclaimer:

This assessment is not a final diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and the findings may change with progress and intervention. The recommended tests are external and provided through Neurazon (Canada). These are suggestions, not obligatory, and are intended to support a deeper understanding of the child's developmental profile. Please refer to the plan provided by Neurazon for further information. These tests are not conducted directly through our center.
