

Director's Report on Developmental Progress Assessment

Date of Visit: 25-08-2025

Child's Name: Sara H Hussein

Date of Birth: 2019-04-15

Gender: Female

Guardian: Hazim

Overview

Sara was assessed for developmental functioning. Findings indicate **information processing delays** and broader **developmental delays** that have led to **intellectual developmental delay features** with **acquired features of autism**. **Further analyses** are recommended to clarify contributing biological factors and to optimize the intervention plan.

Recommended Plan

1) Development Protocol for Information Processing

- Implement a structured protocol for **4 months** (attention, working memory, comprehension, processing speed).
- **Reevaluate in person** after 4 months to establish a clear baseline and adjust goals.
- Continue and adapt the intervention according to measured progress.

2) Main Recommended Analyses (through Canada – Neurazon)

The tests are provided through **Neurazon (Canada)**. They are **recommendations, not obligatory**, and are **not conducted directly through our center**. Please refer to their report and assessment.

3) Therapy

- **Speech Therapy: 2 sessions per week** focusing on receptive/expressive language, social communication, and reading-for-meaning.
- **Occupational Therapy: 2 sessions per week** targeting sensory regulation, fine-motor skills, and daily-living routines.
- Parent-guided home routines (15–20 minutes daily) to reinforce attention, sequencing, and self-regulation strategies.

Conclusion

This document reflects a developmental assessment. Sara is **capable of improvement** with consistent therapy, family engagement, and the recommended analyses. Findings may evolve with progress and at the next in-person reassessment.

Notes on External Testing

The above tests are provided through **Neurazon (Canada)**. They are **recommendations, not obligatory**, and are **not conducted directly through our center**.

Disclaimer

This assessment is **not a final diagnosis** but a developmental evaluation based on current observations. The child is open to improvement, and findings may change with progress and intervention.
