Case history

The child is about 3 years 6 monthes old male, who came to our clinic for an audiological assessment, Sharaa, his

parents main concern is that he has limited verbal communication with others.

ABR Results:

ABR was conducted to him while he was , wave V was detected at 90, 70, 60 dBnHL in right ear , and at 90 , with

latency in the waves .

Tympanometry: flat type (B) bilaterally

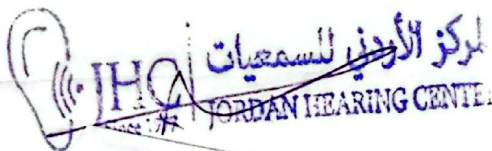

Results :

He appears to have moderate conductive hearing loss bilaterally

Recomendations:

- Referral back to Dr. Ali Al Sharaa .

- Retest after treatment
