

Director's Report on Developmental Progress Assessment

Date of Visit: 12-07-2025

Child's Name: Mayed Waleed Almaazi

Date of Birth: 30-08-2021

Gender: Male

Guardian Name: Waleed

Overview:

Mayed was assessed at our center and shows signs of **information processing delays** and **developmental delays**, currently presenting with **Hyperlexia Type 1**, and progressing toward **Hyperlexia Type 2**. Early intervention is crucial at this stage to support proper cognitive, language, and social development, and to help guide the child toward the more functional profile of **Hyperlexia Type 3**. Further evaluation and targeted support are recommended.

Recommended Plan:

1. **Development Protocol for Information Processing:**
 - Duration: 4 months, followed by in-person reevaluation
 - Establish a cognitive and developmental baseline
 - Continue with the customized intervention plan
2. **Recommended Analyses (via Neurazon – Canada):**

Please refer to their report and assessment. These analyses are not done at EICADD.

3. **Recommended Therapy:**
 - **Neuroplasticity Rehabilitation Therapy**
 - Frequency: 2–3 sessions per week
 - Start: After 2 months of initial intervention and analysis

Disclaimer:

This assessment is not a final diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and the findings may change with progress and

intervention. The recommended tests are external and provided through Neurazon (Canada). These are suggestions, not mandatory, and are intended to support a deeper understanding of the child's developmental profile. Please refer to the plan provided by Neurazon for further information. These tests are not conducted directly through our center.
