

Director's Report on Developmental Progress Assessment

Date of Visit: 30-09-2025

Child's Name: Hoor Salmen Huwail

Date of Birth: 11-08-2019

Age: 6 years old

Gender: Female

Guardian: Salmen

Assessment Overview

Hoor Salmen Huwail was assessed on 30-09-2025 at EICADD Center. The evaluation showed **information processing delays, intellectual developmental delays, and global developmental delays including motor delays**. These developmental challenges are linked to a **genetic variant affecting white matter and brain development**, which has also been reported to carry a risk of **potential epileptic activity**, as indicated by previous analyses.

Recommended Plan

1. Development Protocol for Information Processing

- Begin a structured **4-month development protocol** aimed at supporting information processing.
- **Reassess** the child after 4 months, preferably in person, to establish a new baseline.
- Continue adapting and following the intervention plan based on progress.

2. Recommended Tests through Neurazon (Canada)

Note: The recommended tests are conducted through **Neurazon (Canada)**, a **bioinformatics company partnered with certified laboratories worldwide**.

Please refer to the plan provided by Neurazon for further information.

These tests are **recommendations, not obligatory**, and they are **not conducted directly through our center – EICADD**.

3. Recommended Therapy (After Determining Underlying Causes)

- **Occupational Therapy (OT):** 2 sessions/week
- **Speech Therapy (ST):** 2 sessions/week
- **Plasticity Rehabilitation Therapy:** 2 OT sessions/week focusing on neuroplasticity-based interventions
- **Physiotherapy:** Continue as part of the motor delay support plan

Conclusion

Room is open to improvement with structured intervention. The plan focuses on addressing information processing delays, global developmental delays, and motor challenges. Future adjustments will depend on progress and follow-up assessments.

Disclaimer:

This assessment is **not a final diagnosis** but a developmental evaluation based on current observations. The child's progress will be re-evaluated after 4 months. All recommendations aim to support developmental needs and may be modified as progress is observed.

This report is valid for 4 months from the date of assessment.
