

## EICADD Center Ajman

### Director's Report on Developmental Progress Assessment

**Date of Visit:** 09-11-2025

**Child's Name:** Yousef Tariq Iskandrany

**Date of Birth:** 05-12-2015

**Gender:** Male

**Guardian:** Tariq

### Overview:

Yousef Tariq Iskandrany visited our center for a developmental progress assessment. The evaluation revealed that the child has **information processing delays** and **developmental delays** that have led to **acquired features of autism**. In addition, according to previous neurological assessments shared by his parents, **active abnormal epileptic activity** has been identified, which may further contribute to developmental and processing difficulties.

These findings indicate the need for continuous monitoring and a deeper investigation into the underlying causes through advanced bioinformatics analyses and ongoing developmental protocols.

EICADD

### Recommended Plan:

#### 1) Development Protocol for Information Processing

- Continue the developmental intervention protocol for a period of **4 months**, followed by a **re-evaluation**, preferably conducted in person.
- Reassess progress, establish a developmental baseline, and adjust the plan based on outcomes.
- Continue ongoing interventions addressing information processing and cognitive engagement.

#### 2) Recommended Tests through Neurazon (Canada):

The recommended tests are conducted through **Neurazon (Canada)**, a bioinformatics company partnered with accredited international laboratories. Please note that these are **recommendations and not obligatory**, and the tests are **external** and **not performed directly through our center**. Parents are encouraged to refer to the plan provided by Neurazon for further information regarding sample collection, procedures, and timelines.

### 3) Recommended Therapy:

- **Rehabilitation Therapy:** Continue *occupational therapy* and *speech therapy* regularly to enhance cognitive and communication skills.
- **Plasticity Rehabilitation Therapy:** To be introduced in later stages to promote neuroplasticity and information processing improvement.

### Notes on External Testing:

The recommended tests are conducted through **Neurazon (Canada)**, a bioinformatics company partnered with accredited international laboratories. Please note that these are **recommendations and not obligatory**, and the tests are **external** and **not performed directly through our center**. Parents are encouraged to refer to the plan provided by Neurazon for further information regarding sample collection, procedures, and timelines.

### Disclaimer:

This assessment is not a final diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and findings may evolve with progress and intervention. The recommended tests are external and provided through Neurazon (Canada). These are suggestions intended to support a deeper understanding of the child's developmental profile. Please note that this report remains **active for 4 months** from the date of assessment.

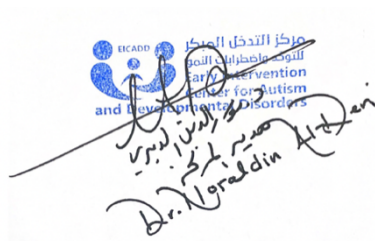

### Centers' Leading Staff:

**Speech Therapist:** Ms. Amira Alomari

**Occupational Therapist:** Ms. Malak Jaber

**Psychologist and behaviour therapist (Ajman):** Ms. Asmaa Alshanawi

**EICADD Center Director**

Dr. Noraldin Hakeem
