

## Ostathna Center – Jordan

## Developmental Progress Assessment Report

Date of Visit: 29-09-2025

Child's Name: Mohammed Saleh Alzahrani

Date of Birth: 13-03-2012

Age: 13 years, 6 months

Gender: Male

Guardian: Saleh

## Overview

Mohammed Saleh Alzahrani visited **Ostathna Center – Jordan** for a developmental progress assessment.

The evaluation indicated that **Mohammed presents with information-processing delays and global developmental delays leading to intellectual developmental features and autism-related features.**

Further **comprehensive analyses are recommended** to clarify contributing factors and to design a targeted intervention plan.

## Recommended Plan

## 1) Development Protocol for Information Processing

- Continue the **development protocol for 4 months.**
- **Reevaluate after 4 months**, preferably in person, to establish a new baseline and adjust the plan as needed.
- **Continue with the intervention plan** for sustained developmental progress.

## 2) Recommended Tests through Neurazon (Canada)

- **Precision Health Analysis – Neurazon (Canada)**  
Provides a more detailed analysis of the underlying contributing factors.  
Sample: Saliva | Turn-around: approximately 4 months (business days).
- **Neuronal Growth Factors Absorption Analysis – Neurazon (Canada)**  
Assesses absorption-related factors that may impact brain and body development.  
Sample: Hair | Turn-around: approximately 2 months (business days).  
Recommended to repeat every 6–12 months.

The recommended tests are **conducted externally through Neurazon (Canada), a bioinformatics company partnered with certified laboratories worldwide.** These are **recommendations, not obligatory**, and they are **not conducted directly through Ostathna Center.**

## 3) Recommended Therapy

- **Plasticity Rehabilitation Therapy** – to be considered at a later stage once the child is ready for this intensive therapy.

## Conclusion

Mohammed will benefit from the **4-month development protocol** followed by a **re-evaluation** to adjust his individualized plan.  
The external analyses through **Neurazon (Canada)** will help guide the most effective support strategies.  
Plasticity Rehabilitation Therapy is advised for future stages as readiness improves.

## Disclaimer

This assessment is **not a final diagnosis but a developmental evaluation based on current observations.**  
The child's profile is **open to improvement**, and findings may change with therapy and intervention.

The recommended tests are **external and provided through Neurazon (Canada)**; they are **suggestions, not obligatory**, intended to support a deeper understanding of the child's developmental profile.

This report is **issued by Ostathna Center – Jordan** and is **valid for 4 months** from the date of assessment.

*This report is valid for 4 months from the date of assessment.*
