

EICADD Center Ajman

Developmental Progress Assessment Report

Date of Visit: 14-12-2025

Child's Name: yousef-yaser, alhmoudi

Date of Birth: 01-09-2020

Age: 63 months

Gender: Male

Guardian: Yaser

Overview

The child attended an assessment at EICADD Center Ajman. Based on the evaluation, the child presents with **information processing delays** and **developmental delays**, which are contributing to **acquired features of Hyperlexia Type 2** (acquired features consistent with high-functioning autism). The child remains **open for improvement**, however **further analysis is required** to better understand the contributing factors and to guide the most targeted plan.

Recommended Plan

1) Development Protocol for Information Processing

- Continue the structured development protocol for **4 months**, then **re-evaluate** the child (preferably **in person**).
- Reassess progress to establish a **clear baseline** and an **improvement projection**.
- Continue with ongoing sessions and intervention according to the current plan.

2) Recommended Therapy (after determining the causes)

- **Plasticity rehabilitation therapy/ OT (intensive):** 2–3 sessions per week
- Suggested start: **in approximately 3 months**, based on readiness and results

Conclusion

The child has shown a developmental profile consistent with information processing delays and acquired Hyperlexia Type 2 features. With continued structured intervention and targeted testing

to clarify contributing factors, the child has strong potential for further improvement.
Reassessment after 4 months is recommended to adjust the plan based on measured progress.

Notes on External Testing

The recommended tests are conducted through **Neurazon (Canada), a bioinformatics company partnered with certified laboratories worldwide**. Please refer to the plan provided by Neurazon for further information. Please note that these are recommendations and not obligatory, and they are not conducted through our centers directly.

Disclaimer

This assessment is not a final diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and the findings may change with progress and intervention. The recommended tests are external and provided through Neurazon (Canada). These are suggestions, not obligatory, and are intended to support a deeper understanding of the child's developmental profile. Please refer to the plan provided by Neurazon for further information. These tests are not conducted directly through our center.

This report is valid for 4 months from the date of assessment.
