

Director's Report on Developmental Progress Assessment

Date of Visit: 19-05-2025

Child's Name: Yasser Ouais Djierioui

Date of Birth: 01-06-2020

Age: 4 years

Gender: Male

Guardian: Ouais

Overview:

Yasser Ouais Djierioui was assessed at our center to evaluate his developmental profile. The assessment revealed significant **information processing delays, intellectual developmental delays, and global developmental delays**. However, the child **does not meet the criteria for Autism Spectrum Disorder (ASD)** at this stage.

While Yasser demonstrates delays across multiple areas of development, there are no fixed patterns of behavior or interaction that would classify his case under autism. Instead, his profile points toward cognitive and processing challenges that may benefit greatly from early therapeutic intervention and biomedical investigation.

Recommended Plan:

1) Development Protocol for Information Processing:

- Initiate a structured developmental protocol over a 4-month period.
- Follow up with an in-person reevaluation at the end of the protocol.
- Establish a developmental and behavioral baseline.
- Adjust and continue the intervention plan according to progress observed.

2) Recommended Tests through Neurazon Canada:

Main Tests:

Please refer to their report.

3) Recommended Therapy:

- **Neuroplasticity Therapy (UAE):**
 - A specialized intervention focused on enhancing cognitive processing, brain function, and developmental outcomes.
 - The therapy plan will be adjusted based on the child's specific neurological response over time.

Conclusion:

Yasser's case presents with intellectual and global developmental delays, but without definitive signs of autism. With the right therapeutic support and further testing to identify contributing factors, Yasser has the potential for meaningful improvement in multiple developmental domains.

Disclaimer:

This assessment is not a final diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and the findings may change with progress and intervention. The recommended tests are external and provided through Neurazon (Canada). These are suggestions, not obligatory, and are intended to support a deeper understanding of the child's developmental profile. Please refer to the plan provided by Neurazon for further information. These tests are not conducted directly through our center.
