

Director's Report on Developmental Progress Assessment

Date of Visit: 01-01-2023

Child's Name: Ghaith Ahmad Althunibat

Date of Birth: 01-01-2023

Gender: Male

Guardian: Ahmad

Overview

Ghaith Ahmad Althunibat was assessed at our center on 01 January 2023. The assessment revealed **information-processing delays** and **developmental delays**.

While Ghaith does **not currently score as a case of autism**, these delays highlight the importance of **early intervention** to support his developmental progress and reduce future risks.

Recommended Plan

1) Development Protocol for Information Processing

- Begin the tailored development protocol for **4 months**.
- Reassess after 4 months—preferably **in person**—to establish a baseline and adapt the plan according to progress.
- Continue the intervention plan thereafter to ensure consistent developmental support.

2) Main Recommended Analyses – Conducted through Neurazon (Canada)

- **No additional tests are required at this stage.**
Early therapy and monitoring will be prioritized. If future evaluations indicate the need for further analyses, they will be recommended accordingly.

Notes on External Testing:

If future tests are needed, they will be recommended through **Neurazon (Canada)**, a bioinformatics company partnered with certified laboratories worldwide. These tests would be external to our center. Please note that they are **recommendations and not obligatory**, and they are not conducted directly through EICADD.

3) Recommended Therapy

- **Rehabilitation Therapy:**
 - 1–2 Speech-Therapy (ST) sessions per week
 - 1–2 Occupational-Therapy (OT) sessions per week
 - 1–2 Language-Therapy (LT) sessions per week
- Alternatively, if professional sessions are not accessible or need to be supplemented at home:
 - A **2-hour parent training session** to guide home-based interventions for supporting Ghaith's development.

Conclusion

Early intervention is key to improving developmental outcomes for Ghaith. Consistent therapy—whether center-based or parent-led—will play a crucial role in supporting his information-processing and developmental progress.

Disclaimer

This assessment is **not a final diagnosis** but a developmental evaluation based on current observations. Ghaith Ahmad Althunibat is open to improvement, and the findings may change with progress and intervention.

This report remains **active for 4 months** from the date of assessment.

This report is valid for 4 months from the date of assessment.
