

Developmental Assessment Report

Developmental Assessment Report

Child's Name: Laith Omar Alsaleh

Date of Birth: 06 April 2021

Date of Assessment: 22 May 2025

Age at Assessment: 4 years and 1 month

Guardian: Omar

Assessment Summary:

Laith Omar Alsaleh was assessed at EICADD Center on 22 May 2025. The evaluation revealed signs of **information processing delays** and **global developmental delays**, which have contributed to the emergence of **acquired features of autism**. These findings indicate a need for continued observation and advanced testing to better understand the child's developmental profile and underlying physiological contributors.

Recommended Plan:

1) Development Protocol for Information Processing

- Initiate a tailored intervention protocol focused on enhancing sensory processing, cognitive regulation, and neural connectivity.
- **Follow-up Evaluation:** After 4 months to:
 - Monitor progress,
 - Adjust the protocol as needed, and
 - Establish a more accurate developmental baseline.

2) Recommended Analyses (through Neurazon – Canada):

- Please refer to their report.

3) Recommended Therapy:

- **Mitotherapy (Photobiomodulation):**
Non-invasive light therapy aimed at stimulating mitochondrial function and cellular repair to support brain recovery. Recommended twice weekly.
- **Speech Therapy (2 sessions/week):**
To support language development, communication initiation, and expressive skills.
- **Occupational Therapy (2 sessions/week):**
To improve fine motor coordination, sensory integration, and adaptive skills for daily functioning.

Disclaimer:

This assessment is not a final diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and the findings may change with progress and intervention. The recommended tests or therapies are suggestions and intended to support a deeper understanding of the child's developmental profile. Please consult your care provider or follow the plan provided for more detailed guidance.
