

Director's Report on Developmental Progress Assessment

Date of Visit: 16-08-2025

Case No.: 5314325431

Child's Name: Hessa Abdalla

Date of Birth: 28-06-2020

Sex: Female

Overview

Hessa Abdalla was assessed in person at our center. She has **information processing delays** and **developmental delays** that have led to **autism features**. According to the **Precision Health Analysis performed by Neurazon (Canada)**, autism-linked genetic variants were identified, indicating a biological component. Hessa showed **great improvement on the first protocol**. Further assessment is recommended to refine the intervention plan.

Recommended Plan

1. Development Non-medicinal Protocol for Information Processing

- Apply for 4 months, then reassess in person.
- Reevaluate the plan and establish a clear baseline.
- Continue and adjust the intervention according to progress.

2. Main Recommended Analyses

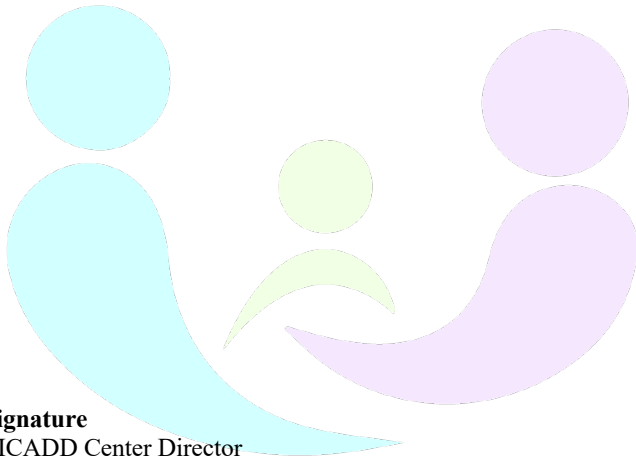

- Please refer to Nueroazon's report and assessment. These analyses are not done at EICADD.

3. Recommended Therapy

- **Neuroplasticity rehabilitation therapy:** 2 to 3 sessions per week.

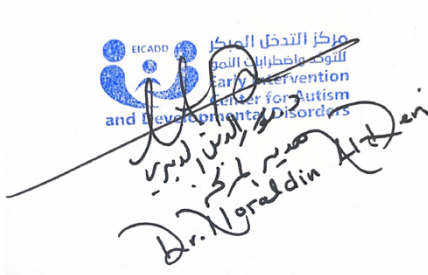

Disclaimer

This assessment is not a final diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and findings may change with progress and intervention. The recommended tests are external and provided through **Neurazon (Canada)**. These are suggestions, not obligatory, and are intended to support a deeper understanding of the child's developmental profile. **Please refer to the plan provided by Neurazon for further information. These tests are not conducted directly through our center.**
