

Director's Report on Developmental Progress Assessment

Date of Visit: 25-06-2025

Child's Name: Ahmad Feras Al Faqir

Date of Birth: 11-05-2018

Overview:

Ahmad was assessed at our center and presents with **information processing delays** and **developmental delays** leading to signs of **hyperlexia**, more specifically aligned with **Hyperlexia Type 2**. These are classified as **acquired features of autism**. While not diagnosed as autism, these features indicate an altered developmental trajectory that requires targeted intervention. Further analysis is needed to determine the underlying causes.

Recommended Plan:

1. Development Protocol for Information Processing:

- Continue with the protocol for **4 months**, followed by an in-person reevaluation
- Reassess to establish a new developmental baseline
- Adjust and continue the intervention based on results

2. Recommended Tests (Canada-based):

- Please refer to their report and assessment. These tests are not done at EICADD.

3. Recommended Therapy (After Determining the Causes):

- **Mitotherapy:** 2 light therapy (LT) sessions per week
- **Occupational Therapy:** 2 sessions per week
- **Speech Therapy:** 1 session per week
- **Neuroplasticity Rehabilitation Therapy:** Intensive, available in UAE or when accessible in Jordan

Disclaimer:

This assessment is not a final medical diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and the findings may change with progress and intervention. The recommended tests are external and provided through Neurazon (Canada). These are suggestions, not obligatory, and are intended to support a deeper understanding of the child's developmental profile. Please refer to the plan provided by Neurazon for further information. These tests are not conducted directly through our center.

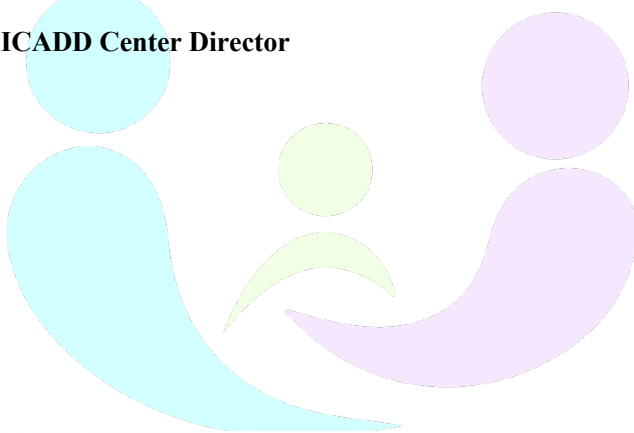

Centers' Leading Staff:

Speech Therapist: Ms. Amira Alomari

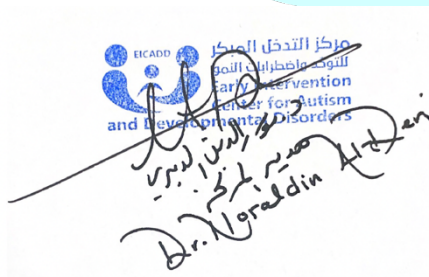

Occupational Therapist: Ms. Malak Jaber

Psychologist and behaviour therapist (Ajman): Ms. Asmaa Alshanawi
