

Director's Report on Developmental Progress Assessment

Date of Visit: 25-08-2025

Child's Name: Jad Mahmoud Elwaked

Date of Birth: 2021-11-04

Gender: Male

Guardian: Mahmoud

Overview

Jad was reassessed today. At the first evaluation he presented with **information processing delays, global developmental delays, speech delay, and attention-deficit/hyperactivity features**. On today's in-person review, **many of these symptoms have markedly diminished**, indicating **high potential for ongoing improvement**. Residual challenges remain in information processing and language organization, which will benefit from structured intervention.

Recommended Plan

1) Development Protocol for Information Processing

- Implement a structured protocol for **4–6 months** targeting attention, processing speed, working memory, comprehension, and self-regulation.
- **Reevaluate in person** at the end of this period to establish a new baseline and adjust goals.
- Continue and **adapt the** intervention based on measured progress.

2) Recommended Therapy

- **Sessions plan — monthly:** set goals and schedule at a monthly case conference with the family (and school when relevant). Focus areas:
 - Speech-language (receptive/expressive, pragmatics, play/joint attention)
 - Attention and self-regulation routines
 - Fine-motor and daily-living skills as needed
- Provide a **home program (15–20 minutes daily)** to reinforce attention, sequencing/turn-taking, and language enrichment.

Conclusion

This document reflects a developmental assessment. Jad shows **clear improvement** and is **capable of further gains** with consistent therapy, family engagement, and monthly session planning. Findings may evolve with progress and at the next in-person reassessment.

Disclaimer

This assessment is **not a final diagnosis** but a developmental evaluation based on current observations. The plan may change with progress and future clinical reviews.
