

## EICADD Center Ajman

### Director's Report on Developmental Progress Assessment

**Date of Visit:** 14-09-2025

**Child's Name:** Afnan-Ahmed Salem

**Date of Birth:** 21-08-2019

**Age:** 6 years

**Gender:** Male

**Guardian:** Ahmed

### Overview:

Afnan was assessed at our center and presented with **information processing delays and developmental delays**, which are currently leading to **features of acquired autism**. At this stage, the assessment highlights the need for further analyses to better understand the underlying causes and to refine intervention strategies.

### Recommended Plan:

#### 1. Development Protocol for Information Processing

- Implement a structured developmental protocol for a duration of 4 months.
- Reevaluate the child after 4 months, preferably in person, to establish a baseline and adjust the plan accordingly.
- Continue with the intervention plan consistently to support developmental progress.

#### 2. Recommended Tests through Neurazon (Canada):

Please refer to the plan provided by Neurazon for further information. These tests are **recommendations and not obligatory**, and they are **not conducted directly through our centers**. Please refer to their report and assessment.

#### 3. Recommended Therapy

- **Neuroplasticity Rehabilitation Therapy:**
  - To be considered at a later stage once readiness is established.
  - Current focus remains on strengthening baseline developmental and processing capacities first.

### **Conclusion:**

This is not a final diagnosis but rather a developmental assessment. Afnan shows acquired features of autism due to information processing and developmental delays. With continued intervention and proper follow-up through external testing, there is potential for meaningful improvement. A reassessment in 4 months is essential to track progress.

### **Notes on External Testing:**

Please refer to the plan provided by Neurazon for further information. These tests are **recommendations and not obligatory**, and they are **not conducted directly through our centers**.

### **Disclaimer:**

This assessment is not a final diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and the findings may change with progress and intervention. The recommended tests are external and provided through Neurazon (Canada). These are suggestions, not obligatory, and are intended to support a deeper understanding of the child's developmental profile. Please refer to the plan provided by Neurazon for further information. These tests are not conducted directly through our center.

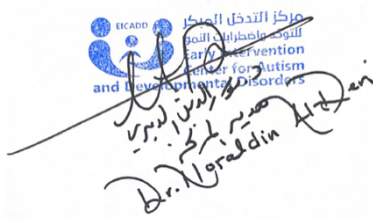

### **Center's Leading Staff:**

**Speech Therapist:** Ms. Amira Alomari

**Occupational Therapist:** Ms. Malak Jaber

**Psychologist and behaviour therapist:** Ms. Asmaa Alshanawi

**EICADD Center Director**

A handwritten signature in black ink, reading "Dr. Noraldin", is written over a circular stamp. The stamp contains the EICADD logo and the text "مركز التدخل المبكر للتوحد واضطرابات النمو Early Intervention Center for Autism and Developmental Disorders".
