
Director's Report on Developmental Progress Assessment

Date of Visit: 24-07-2025

Child's Name: Omar Alkatib

Date of Birth: 08-01-2019

Age at Visit: 6 years and 6 months

Gender: Male

Guardian's Name: Mohamed

Overview:

Omar Alkatib was assessed at our center on July 24th, 2025. The evaluation revealed both developmental and information processing delays, which have contributed to acquired features resembling autism spectrum characteristics. Additionally, the child shows signs consistent with intellectual developmental delays, particularly in comprehension, expressive abilities, and adaptive responses. The child has positive delays in white matter as shown in previous MRI done by neurologists and positive EEG.

Despite the current challenges, Omar is capable of improvement with appropriate intervention and consistent follow-up. His condition remains open to progress, especially through tailored neurodevelopmental strategies.

Recommended Plan

1. **Development Protocol for Information Processing:**
 - **Duration:** 4 months
 - **Goals:** Establish baseline for cognitive and developmental function, and reduce processing delays
 - **Follow-Up:** In-person reassessment after 4 months to modify and optimize the intervention protocol
 2. **Recommended Therapy:**
 - **Neuroplasticity Rehabilitation Therapy:**
 - To begin at a moderate pace and increase in intensity in later stages
 - Focus: Strengthening white matter pathways, attention, communication, and problem-solving skills
 - **Speech and Occupational Therapy:**
 - To be continued in the child's home country
 - Focus: Enhancing language development, fine motor coordination, and adaptive behavior
-

Recommended Tests through Neurazon (Canada)

Please refer to the plan provided by Neurazon for further information. Please note that these are recommendations and not obligatory, and they are not conducted through our centers directly.

Follow-Up Plan:

- **Reassessment Interval:**

A full reassessment is recommended in 4 months to evaluate developmental gains and modify support strategies as needed.

Disclaimer:

This assessment is not a final diagnosis but a developmental evaluation based on current observations. The child is open to improvement, and the findings may change with progress and intervention. The recommended tests are external and provided through Neurazon (Canada). These are suggestions, not obligatory, and are intended to support a deeper understanding of the child's developmental profile. Please refer to the plan provided by Neurazon for further information. These tests are not conducted directly through our center.

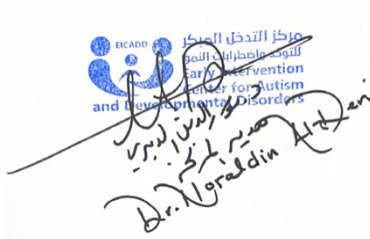

Centers' Leading Staff:

Speech Therapist: Ms. Amira Alomari

Occupational Therapist: Ms. Malak Jaber

Psychologist and behaviour therapist (Ajman): Ms. Asmaa Alshanawi

EICADD Center Director

Dr. Noraldin Al-Dan
